HTTP Archive · State of the Web Report

# State of the Web 2020–2025

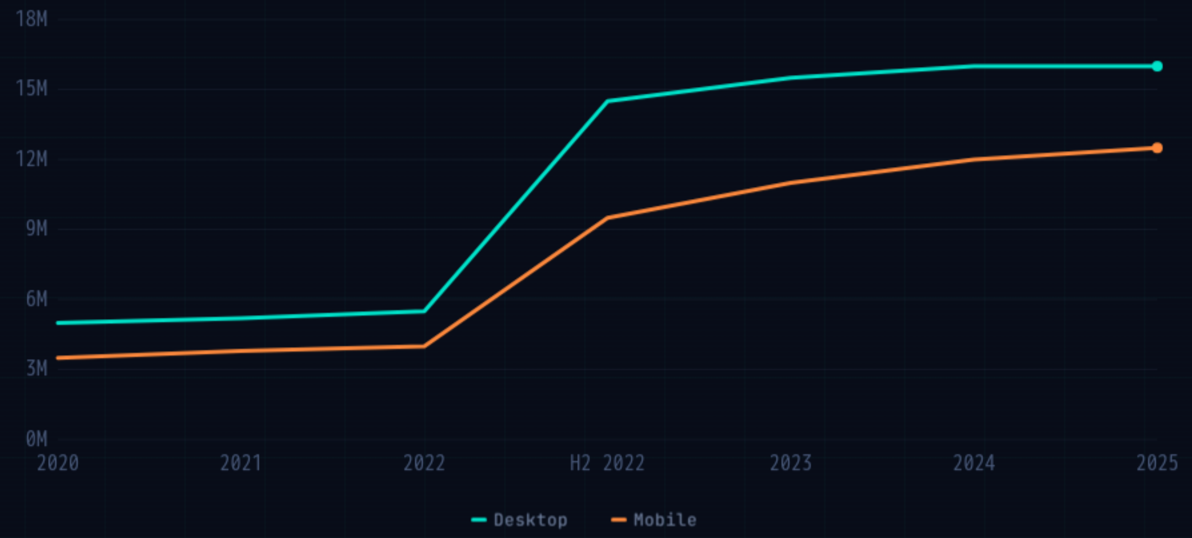
Tracking Page Weight, Protocols & Security at Scale

- Data: Jan 2020 – Mar 2026
- Source: httparchive.org
- Desktop & Mobile

SAMPLE SIZE

# Crawl Sample Size Tripled

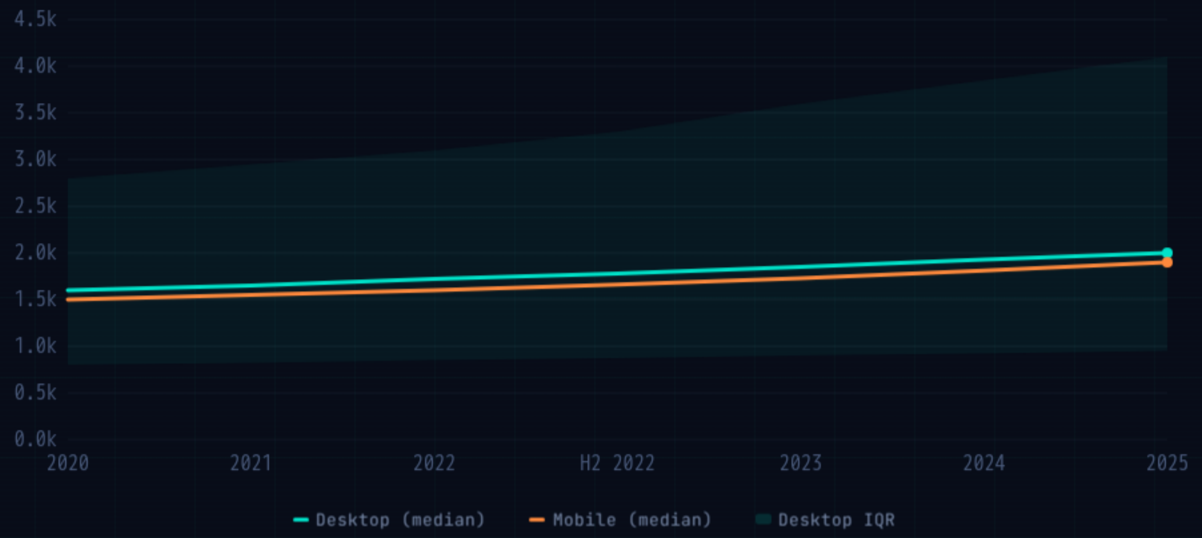
From ~5M to 16M desktop URLs since 2020. Sharp jump mid-2022 as HTTP Archive expanded its crawl infrastructure.



TOTAL TRANSFER SIZE

# Median Page Weight Climbs to ~2,000 KB

Desktop pages up ~25% from ~1,600 KB in early 2020. The 75th percentile exceeds 4,000 KB — a long tail of heavy pages.



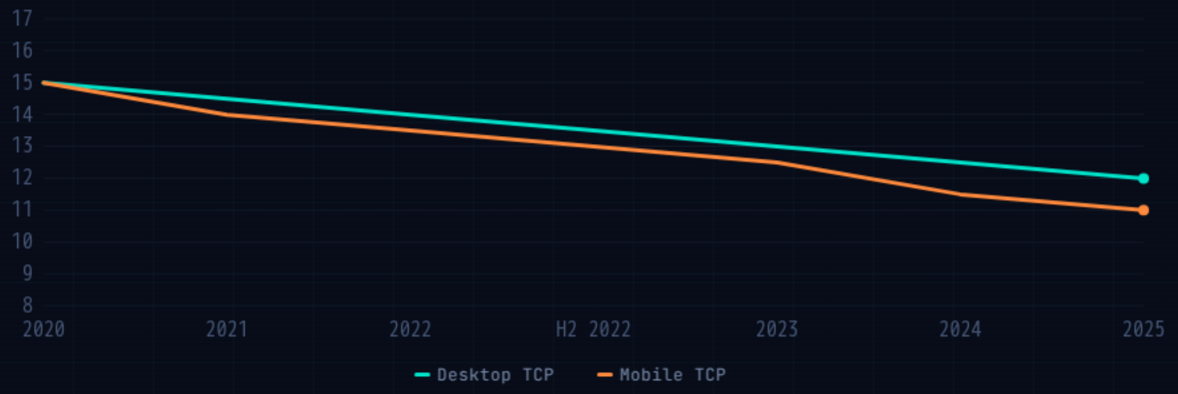
REQUESTS & CONNECTIONS

# More Requests, Fewer Connections

**76**
DESKTOP REQUESTS
▲ 2.7%

**71**
MOBILE REQUESTS
▲ 2.9%

HTTP/2 & HTTP/3 multiplexing allows more requests over fewer TCP connections.



SECURITY

# HTTPS Is Now the Default

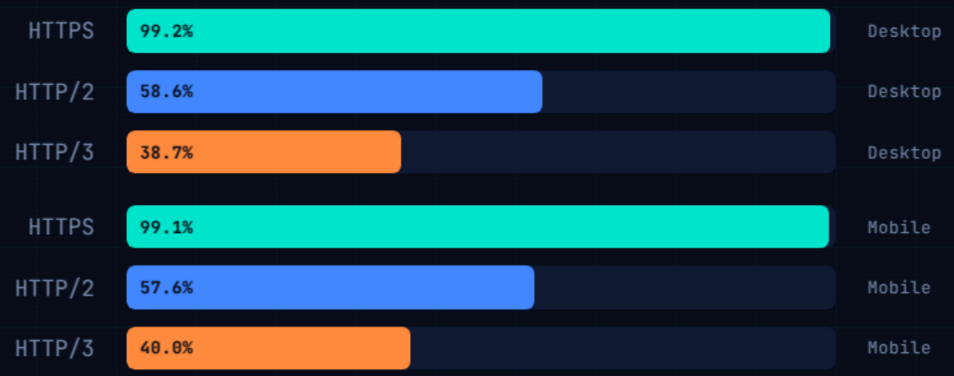
99%+

of all requests use HTTPS

Desktop: 99.2% · Mobile: 99.1%
Up ~19–20 pp from ~80% in 2020

PROTOCOL ADOPTION

# HTTP/2 Holds Steady, HTTP/3 Surges



Note: HTTP Archive measures HTTP/3 support (Alt-Svc advertised) rather than actual usage, as fresh Chrome instances default to HTTP/2 on first connection.

CSS BEST PRACTICES

# font-display Adoption Still Has Room to Grow

**40.1%**
DESKTOP
▲ 14.9% since 2020

**42.5%**
MOBILE
▲ 61.0% since 2020

The `font-display` CSS property helps avoid Flash of Invisible Text (FOIT) during web font loading. While adoption is growing, more than half of pages still risk FOIT.

SUMMARY

# Key Takeaways

**Page Weight Keeps Climbing**
Median desktop pages now transfer ~2,000 KB, roughly 25% heavier than in 2020.

**HTTPS Is Universal**
At 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web.

**HTTP/3 Is the Fastest-Growing Metric**
From near-zero to ~40% support in under four years.

**Fewer TCP Connections**
Multiplexing in HTTP/2 & HTTP/3 has cut median connections per page by 15-27%.

**font-display Still Underused**
At ~40-42% adoption, there is significant room for improvement in avoiding invisible text during font loading.

**Benchmark your site against these baselines**
Run your URLs through httparchive.org and compare with the metrics above
