Common Patterns Across the 1,001 Deployments

Three dominant patterns have emerged across industries, guiding enterprise strategy.

1. Conversational Customer Agents

The most visible entry point. Virtual assistants handling customer queries, reducing wait times, and lowering human agent workloads.

Examples: Mercedes-Benz, GM OnStar, VW, LUXGEN, Commerzbank, Mercari

2. Employee Productivity Agents

The broadest category. Summarizing documents, accelerating research, drafting content, and filtering organizational data.

Examples: Uber, Rivian, Geotab (Google Workspace with Gemini)

3. Creative and Scale Agents

The fastest-growing frontier. Moving beyond text into multimodal creative production at enterprise scale without losing brand voice.

Examples: Virgin Voyages (Veo), Figma, PODS / Tombras

Takeaways: Where to Start and What to Expect

- **Gen AI is Production-Ready:** Deployments are spanning all 11 major industries right now, moving firmly beyond the experimental phase.
- **Start with Customer & Employee Agents:** These represent the most common, proven entry points with clearly understood paths to deployment.
- **Measurable ROI Arrives Quickly:** Results like a 30% workload reduction and 10,000+ hours saved are achievable within months, not years.
- **Creative & Code are Emerging Fast:** High-impact frontiers are rapidly maturing, offering exponential scale for asset generation and software engineering.
- **The Pace is Accelerating:** With 400 new deployments added recently, early movers are gaining a compounding structural advantage.
