Key Takeaways

Bigger Pages, Smarter Protocols, Stronger Security

1

Page weight keeps climbing

Median desktop pages now transfer ~2,000 KB — roughly 25% heavier than 2020, driven by richer media and JavaScript.

2

HTTPS is the new baseline

At 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web.

3

HTTP/3 is the fastest-growing metric

From near-zero to ~40% support in under four years, HTTP/3 is rapidly becoming mainstream.

4

Fewer TCP connections despite more requests

Multiplexing in HTTP/2 and HTTP/3 cut median connections per page by 15–27%.

5

font-display still underused

At ~40–42% adoption, significant room for improvement in avoiding invisible text during font loading.
