State of the Web

2020 – 2025

Tracking Page Weight, Protocols & Security at Scale

Data range: **January 2020 – March 2026** | Desktop & Mobile crawl data

For web performance engineers and front-end architects

Page Weight ↑

HTTPS ~99%

HTTP/3 Surge

TCP ↓

font-display

httparchive.org

Crawl Sample Size Tripled: From ~5M to 16M Desktop URLs Since 2020

16M

Desktop URLs

Plateau from 2023+

12.5M

Mobile URLs

Plateau from 2023+

3×

Growth since 2020

Sharp jump: mid-2022

Median Page Weight Climbs Steadily to ~2,000 KB on Desktop

~2,000 KB

Desktop median

Up ~25% from 2020

~1,920 KB

Mobile median

~4% below desktop

>4,000 KB

Desktop p75

Long tail of heavy pages

76 Requests per Desktop Page While TCP Connections Drop to 12

REQUESTS PER PAGE (median)

76

Desktop requests

▲ 2.7% since 2020

71

Mobile requests

▲ 2.9% since 2020

Request growth is modest (~3%) despite heavier pages —
browsers load fewer but larger assets

TCP CONNECTIONS PER PAGE (median) — DECLINING

15→12

Desktop TCP

▼ 14.3% decline

15→11

Mobile TCP

▼ 26.7% decline

TCP connections per page, 2020–2025

Multiplexing via HTTP/2 & HTTP/3 reduces TCP overhead per page

HTTPS Requests Reach 99%: Encryption Is Now the Default

99%+

of all web requests use HTTPS

99.2%

Desktop

99.1%

Mobile

↑ ~19–20 percentage points since 2020

Plaintext HTTP is effectively extinct on the modern web

HTTPS adoption over time (%)

HTTP/2 Holds at ~58% While HTTP/3 Support Surges to 40%

Latest snapshot — protocol share by platform

HTTP/3 desktop support — rapid rise

58.6%

HTTP/2

Desktop requests

38.7%

HTTP/3

Desktop support

Measurement note: HTTP Archive measures HTTP/3 *support*, not usage. Fresh Chrome instances default to HTTP/2 on first connection, then discover HTTP/3 via Alt-Svc headers.

Font-Display Usage Reaches 42% on Mobile, Up 61% Since 2020

40.1%

Desktop

▲ 14.9% since 2020

42.5%

Mobile

▲ 61.0% since 2020

What is font-display?

A CSS property controlling how web fonts load. Without it, browsers show **invisible text (FOIT)** until the font arrives.

>57% of pages still at risk.

Key Takeaways

Bigger Pages, Smarter Protocols, Stronger Security

01 Page weight keeps climbing

Median desktop pages now transfer ~2,000 KB — up ~25% from 2020 — driven by richer media and JavaScript.

02 HTTPS is now the baseline

99%+ of all requests use HTTPS. Unencrypted HTTP is effectively extinct on the modern web.

03 HTTP/3 is fastest-growing

From near-zero to ~40% support in under 4 years. HTTP/3 is rapidly becoming mainstream.

04 Fewer TCP connections

HTTP/2 and HTTP/3 multiplexing cut median TCP connections per page by 15–27%, improving efficiency.

05 Font-display still underused

Only ~40–42% of pages use font-display. More than half still risk invisible text during font loading.

Benchmark your site: Compare page weight, HTTPS coverage, protocol mix, and font-display usage against these baselines at httparchive.org/reports/state-of-the-web
