

State of the Web 2020– 2025: Tracking Page Weight, Protocols & Security at Scale

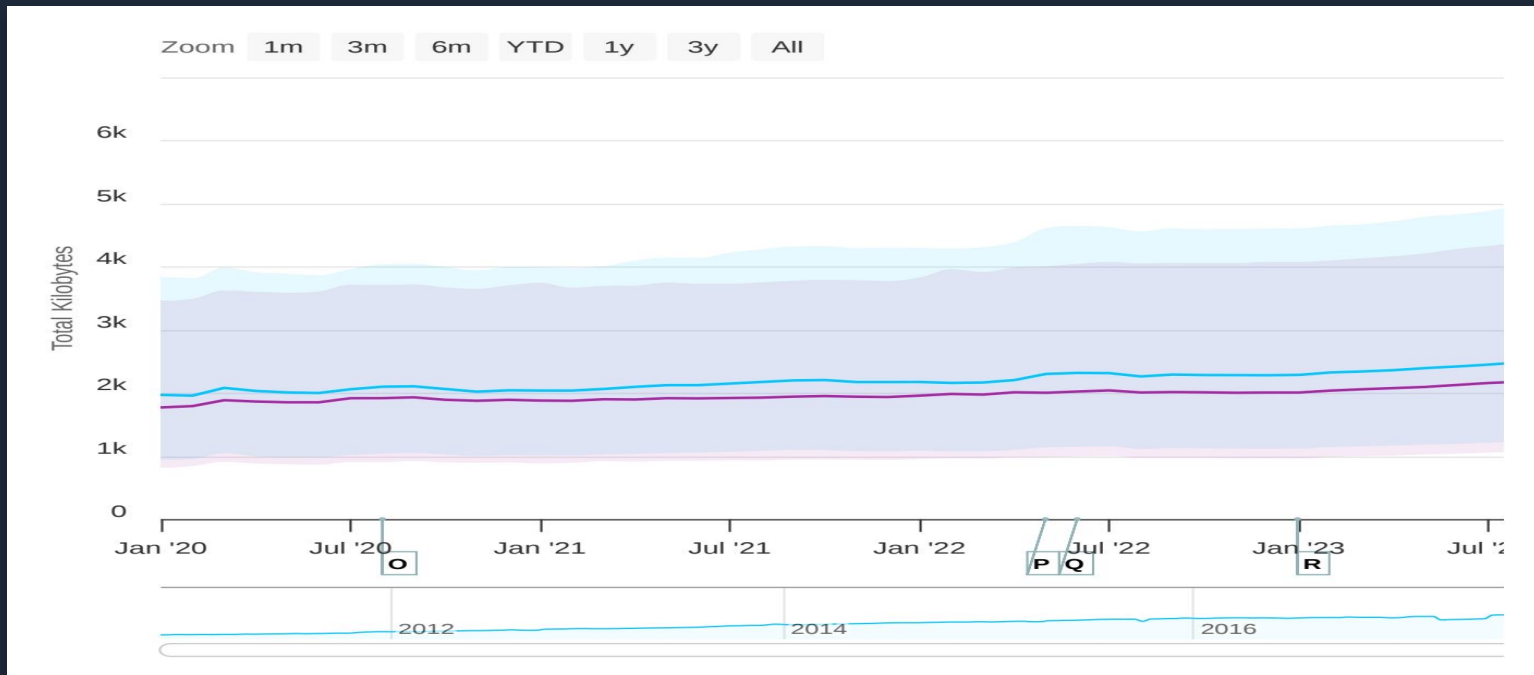

HTTP Archive Trends in Page Weight, Protocols, and Security

Data Source: HTTP Archive | Jan 2020 – Mar 2026

Crawl Sample Size Tripled: From ~5M to 16M Desktop URLs Since 2020

Median Page Weight Climbs Steadily to ~2,000 KB on Desktop

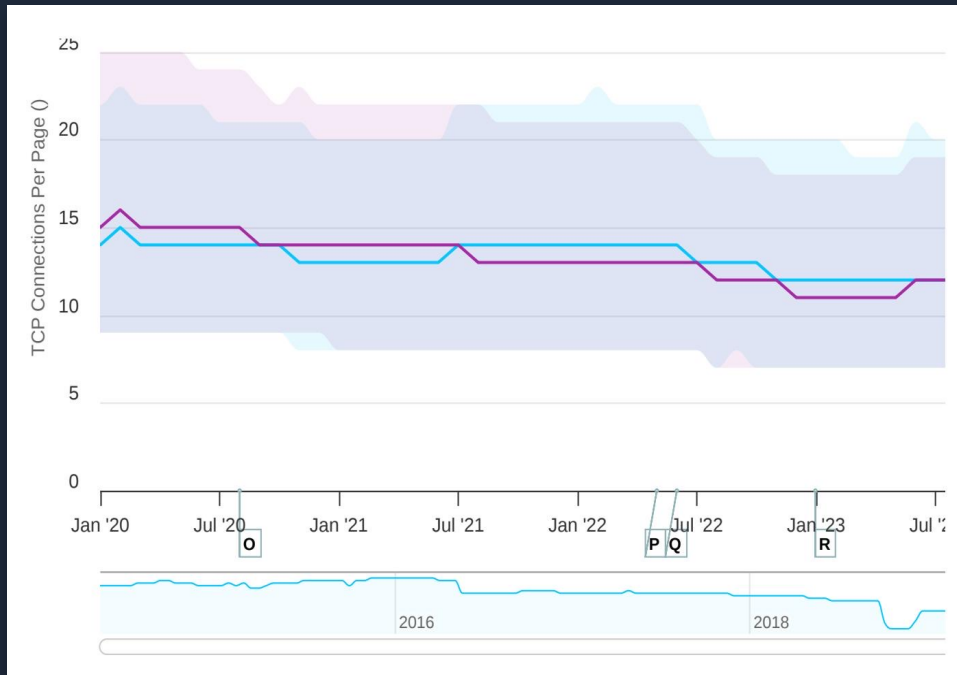

76 Requests per Desktop Page While TCP Connections Drop to 12

Median Requests / Page

76

Desktop (Up 2.7%)

Mobile: 71 (Up 2.9%)

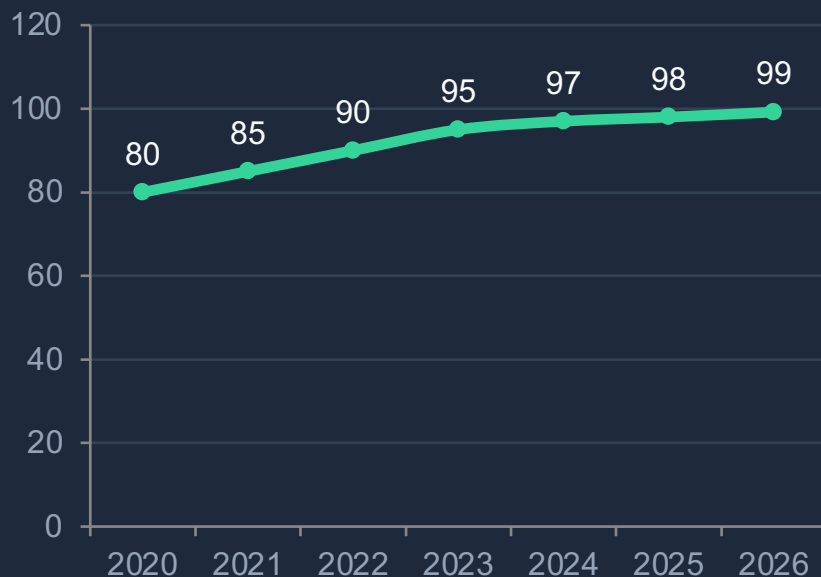

HTTPS Requests Reach 99%: Encryption Is Now the Default

99.2%

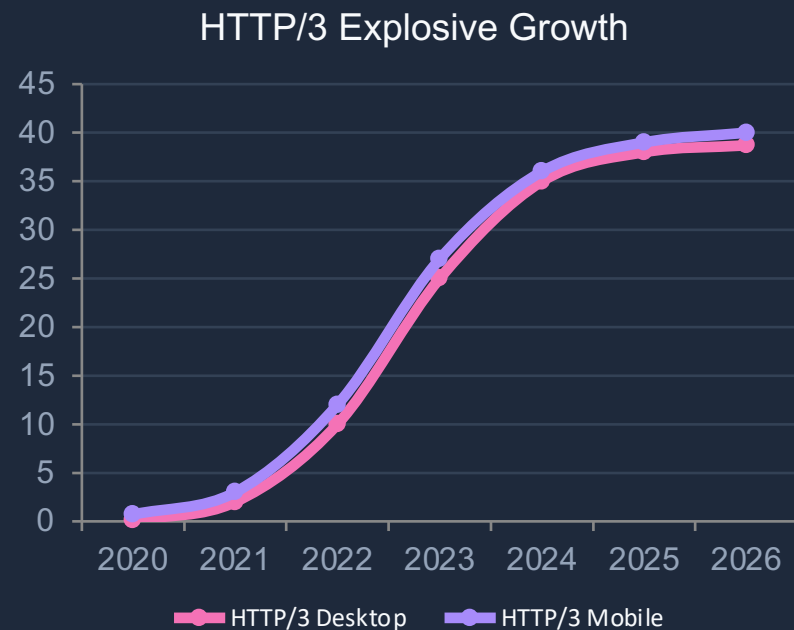

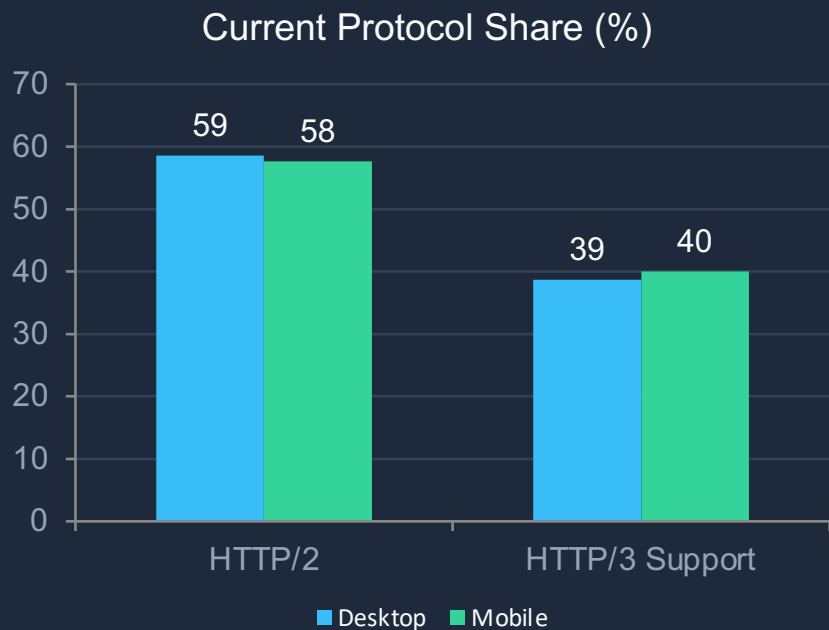

Desktop HTTPS Requests

Mobile at 99.1%

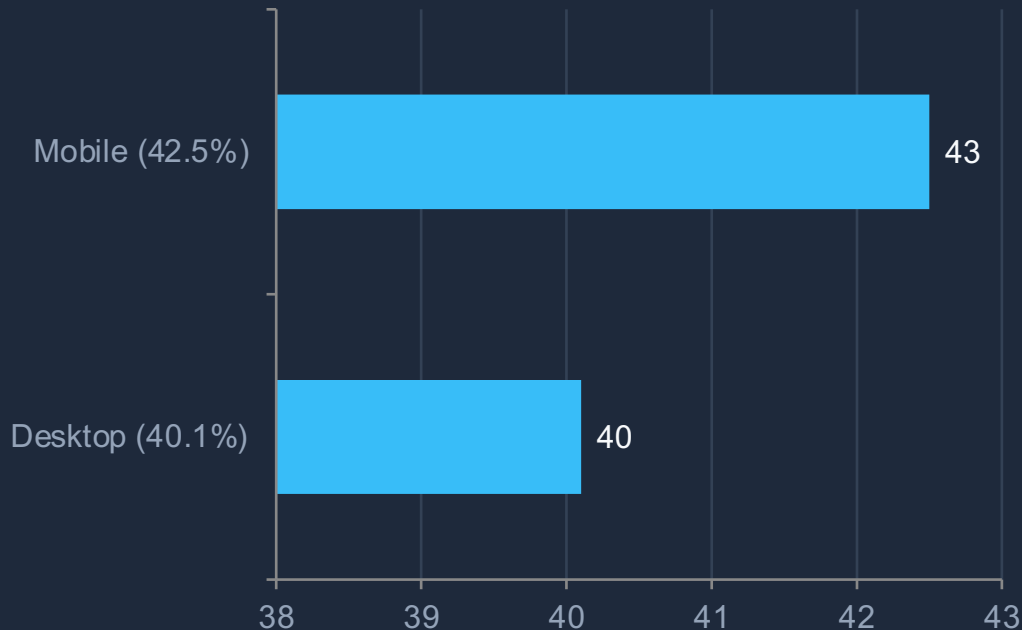

Adoption Trend (Desktop)

HTTP/2 Holds at ~58% While HTTP/3 Support Surges to 40%

Font-Display Usage Reaches 42% on Mobile, Up 61% Since 2020

What is FOIT?

The font-display CSS property prevents the Flash of Invisible Text during web font loading. Still over 50% of sites risk FOIT.

Key Takeaways: Bigger Pages, Smarter Protocols, Stronger Security

- **Page weight continues to grow:** Desktop medians hit ~2,000 KB, a 25% increase since 2020.

HTTPS is effectively universal: At 99%+ of requests, unencrypted HTTP is essentially extinct.

HTTP/3 is mainstream: Surged from near-zero to 40% support in under four years.

Connections are dropping: Multiplexing via HTTP/2 and HTTP/3 cut median TCP connections by up to 27%.

Font-display room for growth: Adoption is ~40-42%, meaning FOIT remains a significant risk for most users.

Call to Action: Benchmark your site's performance against these industry baselines.
