

HTTP ARCHIVE · STATE OF THE WEB REPORT

State of the Web 2020–2025

HTTP Archive trends in page weight, protocols, and security — January 2020 through early 2026.

Audience: web performance engineers

Front-end architecture baselines

Desktop + mobile crawls

CRAWL COVERAGE

Crawl Sample Size Tripled: From ~5M to 16M Desktop URLs Since 2020

January 2020: desktop covered roughly 5M URLs; mobile covered roughly 3.5M URLs.

Mid-2022 jump: desktop reached ~15M and mobile ~10M.

Mid-2023 onward: the crawl stabilized around 16M desktop and 12.5M mobile URLs.

TRANSFER SIZE

Median Page Weight Climbs Steadily to ~2,000 KB on Desktop

Desktop median: up from ~1,600 KB in early 2020 to ~2,000 KB.

Mobile: tracks slightly lower at ~1,900 KB while following the same upward trend.

Long tail: the 75th-percentile desktop page exceeds 4,000 KB.

EFFICIENCY METRICS

76 Requests per Desktop Page While TCP Connections Drop to 12

76

DESKTOP REQUESTS

Median resources per page; ▲ 2.7%.

71

MOBILE REQUESTS

Median resources per page; ▲ 2.9%.

12

DESKTOP TCP

Down from about 15; ▼ 14.3%.

11

MOBILE TCP

Down from about 15; ▼ 26.7%.

More requests are riding over fewer connections as HTTP/2 and HTTP/3 multiplexing improves network efficiency.

SECURITY BASELINE

HTTPS Requests Reach 99%: Encryption Is Now the Default

99%+

99.2% desktop · 99.1% mobile requests use HTTPS

● Desktop ● Mobile

Increase is roughly 19–20 percentage points since early 2020; plaintext HTTP is effectively gone.

PROTOCOL ADOPTION

HTTP/2 Holds at ~58% While HTTP/3 Support Surges to 40%

Latest snapshot

HTTP/3 support trajectory

HTTP Archive measures HTTP/3 support, not actual first-connection usage, because fresh Chrome instances default to HTTP/2 before Alt-Svc discovery.

Font-Display Usage Reaches 42% on Mobile, Up 61% Since 2020

Latest Lighthouse-measured adoption

Desktop: 40.1% of pages use the font-display CSS property, up **14.9%** since 2020.

Mobile: 42.5% adoption, up **61.0%** since 2020.

Performance implication: more than half of pages still risk Flash of Invisible Text during web font loading.

OPERATING BASELINES

Key Takeaways: Bigger Pages, Smarter Protocols, Stronger Security

Page weight climbs

Median desktop pages now transfer ~2,000 KB, roughly 25% heavier than in 2020.

HTTPS is baseline

At 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web.

HTTP/3 accelerates

Support has moved from near-zero to ~40%, making it the fastest-growing protocol metric.

Connections fall

Median TCP connections per page are down 15–27% despite higher request counts.

Fonts need attention

At ~40–42% adoption, font-display still has significant room to grow.

Benchmark your own sites against these baselines: transfer KB, request count, TCP connections, HTTPS share, HTTP/3 support, and font-display coverage.
