

State of the Web

2020–2025

HTTP Archive Trends in Page Weight,
Protocols, and Security

Source: HTTP Archive — httparchive.org
Jan 2020 – Mar 2026

Crawl Sample Size Tripled: From ~5M to 16M Desktop URLs Since 2020

HTTP Archive desktop and mobile URL counts over time

Sharp jump mid-2022: Desktop ~5M → 15M | Mobile ~4.5M → 10M — now plateaued at 16M / 12.5M

Median Page Weight Climbs Steadily to ~2,000 KB on Desktop

Total transfer size (KB) — desktop vs mobile, Jan 2020 to present

Desktop Median

~2,000 KB

▲ ~25% since 2020

Mobile Median

~1,900 KB

▲ ~25% since 2020

75th-percentile desktop page exceeds 4,000 KB — a long tail of heavy pages

76 Requests per Desktop Page While TCP Connections Drop to 12

TOTAL REQUESTS PER PAGE

TCP CONNECTIONS PER PAGE

TCP Connections Declining Over Time

Multiplexing in HTTP/2 and HTTP/3 allows many requests over fewer connections

HTTPS Requests Reach 99%: Encryption Is Now the Default

99%+

of all requests use HTTPS

Desktop 99.2%

Mobile 99.1%

▲ ~19–20 percentage points since early 2020

HTTPS Adoption Over Time

Plaintext HTTP is effectively extinct on the modern web.

HTTP/2 Holds at ~58% While HTTP/3 Support Surges to 40%

Note: HTTP Archive measures HTTP/3 support rather than actual usage because fresh Chrome instances default to HTTP/2 on first connection before discovering HTTP/3 capability via Alt-Svc headers.

Font-Display Usage Reaches 42% on Mobile, Up 61% Since 2020

The font-display CSS property helps avoid Flash of Invisible Text (FOIT) during web font loading

More than half of pages still risk FOIT — significant room for improvement in font loading best practices.

Key Takeaways: Bigger Pages, Smarter Protocols, Stronger Security

1

Page weight keeps climbing — median desktop pages now transfer ~2,000 KB, roughly 25% heavier than in 2020, driven by richer media and JavaScript.

2

HTTPS is the new baseline — at 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web.

3

HTTP/3 is the fastest-growing protocol metric — from near-zero to ~40% support in under four years, rapidly becoming mainstream.

4

Fewer TCP connections despite more requests — multiplexing in HTTP/2 and HTTP/3 has cut median connections per page by 15–27%.

5

Font-display still underused — at ~40–42% adoption, significant room for improvement in avoiding invisible text during font loading.
