

State of the Web 2020–2025

HTTP Archive Trends in Page Weight, Protocols, and Security

Data source: HTTP Archive ‘State of the Web’ report

Coverage: January 2020 through early 2026

Focus: page weight, request & connection efficiency, HTTPS, HTTP/2 vs HTTP/3, and font-display

Crawl Sample Size Tripled

Desktop vs. mobile URL counts over time

Jan 2020: ~5M desktop URLs, ~3.5M mobile URLs

Mid-2022: sharp jump to ~15M desktop, ~10M mobile

Mid-2023 onward: plateau near ~16M desktop /
~12.5M mobile

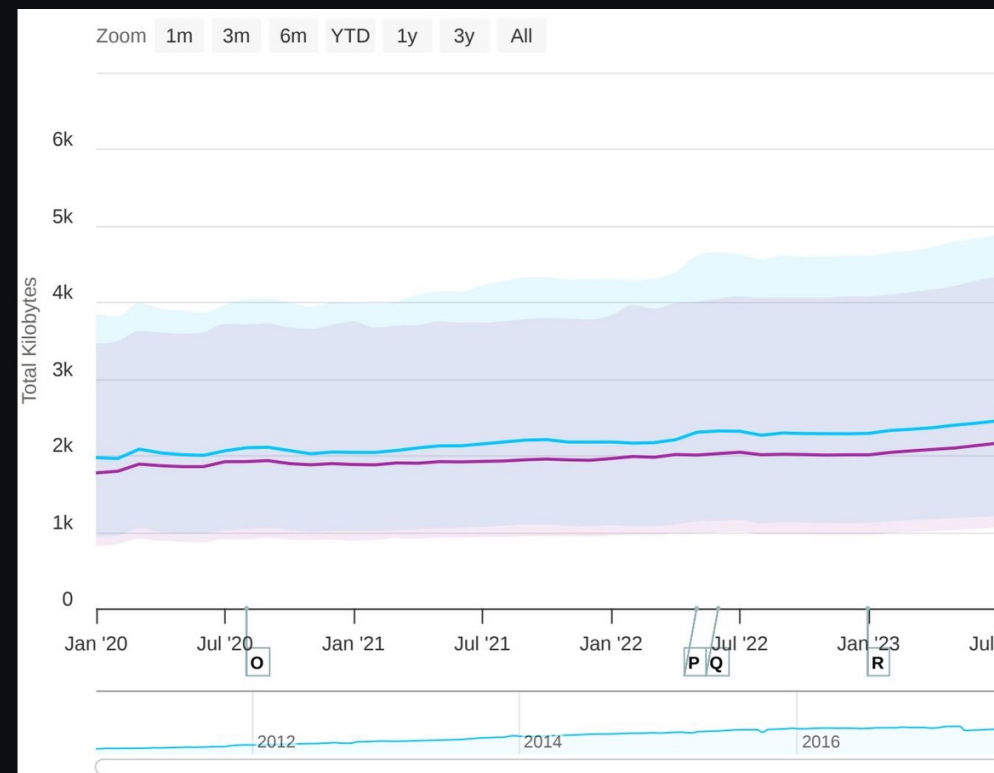

Median Page Weight Climbs to ~2,000 KB (Desktop)

Desktop rises from ~1,600 KB; mobile tracks slightly lower

Median total transfer: ~1,600 KB → ~2,000 KB (desktop)
since early 2020

Mobile median: ~1,900 KB (slightly below desktop)

Long tail: 75th-percentile desktop pages exceed 4,000 KB

Requests and Connections

More resources, fewer TCP connections

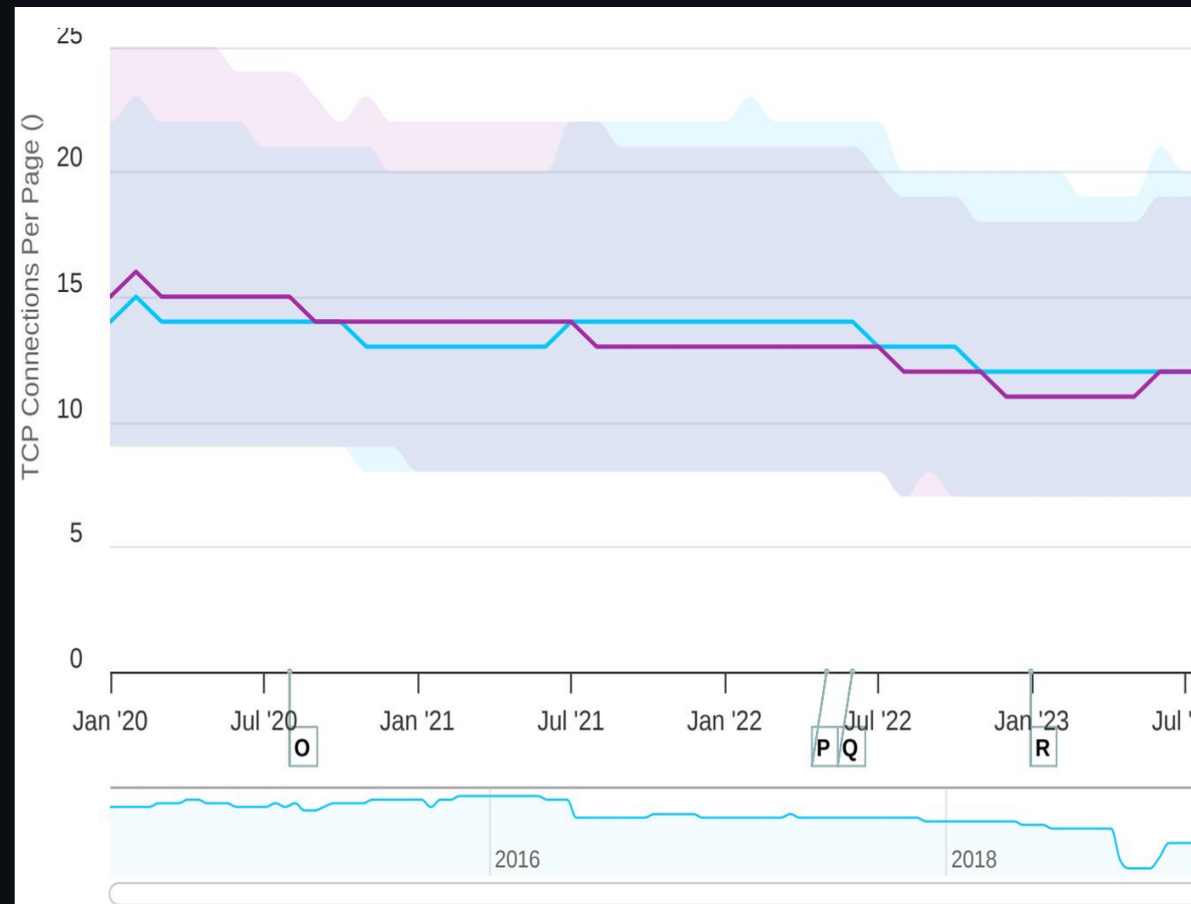

76

Median requests / page (desktop) — 71 on mobile

Requests: 76 desktop / 71 mobile (both up ~3%)

TCP connections per page (median): ~15 → 12 (desktop), ~15 → 11 (mobile)

Interpretation: multiplexing reduces connection overhead

HTTPS Requests Reach 99%+

Encryption is effectively universal

99%+

HTTPS of all requests (99.2% desktop / 99.1% mobile)

Up ~19–20 percentage points since early 2020 (~80% → ~99%)

Plaintext HTTP is effectively gone at scale

HTTP/2 Holds ~58% While HTTP/3 Support Surges ~40%

Latest snapshot + measurement caveat

58.6%

HTTP/2 requests (desktop)

38.7%

HTTP/3 support (desktop)

57.6%

HTTP/2 requests (mobile)

40.0%

HTTP/3 support (mobile)

HTTP/2 share is relatively flat (~58–59%)

HTTP/3 support rose from near-zero to ~39–40%

Caveat: HTTP Archive measures HTTP/3 support (Alt-Svc), not first-visit usage

Font-Display Adoption Reaches 42% (Mobile)

Improves UX by avoiding FOIT

40.1%

Desktop pages using font-display

42.5%

Mobile pages using font-display

Font-Display Usage (latest)

40.1%

42.5%

Desktop

Mobile

Growth since 2020: +14.9% (desktop), +61.0% (mobile)

Still >50% of pages risk Flash of Invisible Text (FOIT)

Key Takeaways

Benchmark your sites against these baselines

Page weight keeps climbing: median desktop ~2,000 KB (▲ ~25% since 2020)

HTTPS is the baseline: 99.2% desktop / 99.1% mobile requests are encrypted

HTTP/3 is the fastest mover: ~38.7% desktop / 40.0% mobile support (from near-zero)

Efficiency gains: median TCP connections dropped (~15 → 12 desktop; ~15 → 11 mobile) despite 76/71 requests

Font-display is improving but underused: 40.1% desktop / 42.5% mobile — opportunity to reduce FOIT

Call to action: compare your median KB, request counts, protocol mix, and connection counts to these HTTP Archive baselines
