
State of the Web 2020–2025

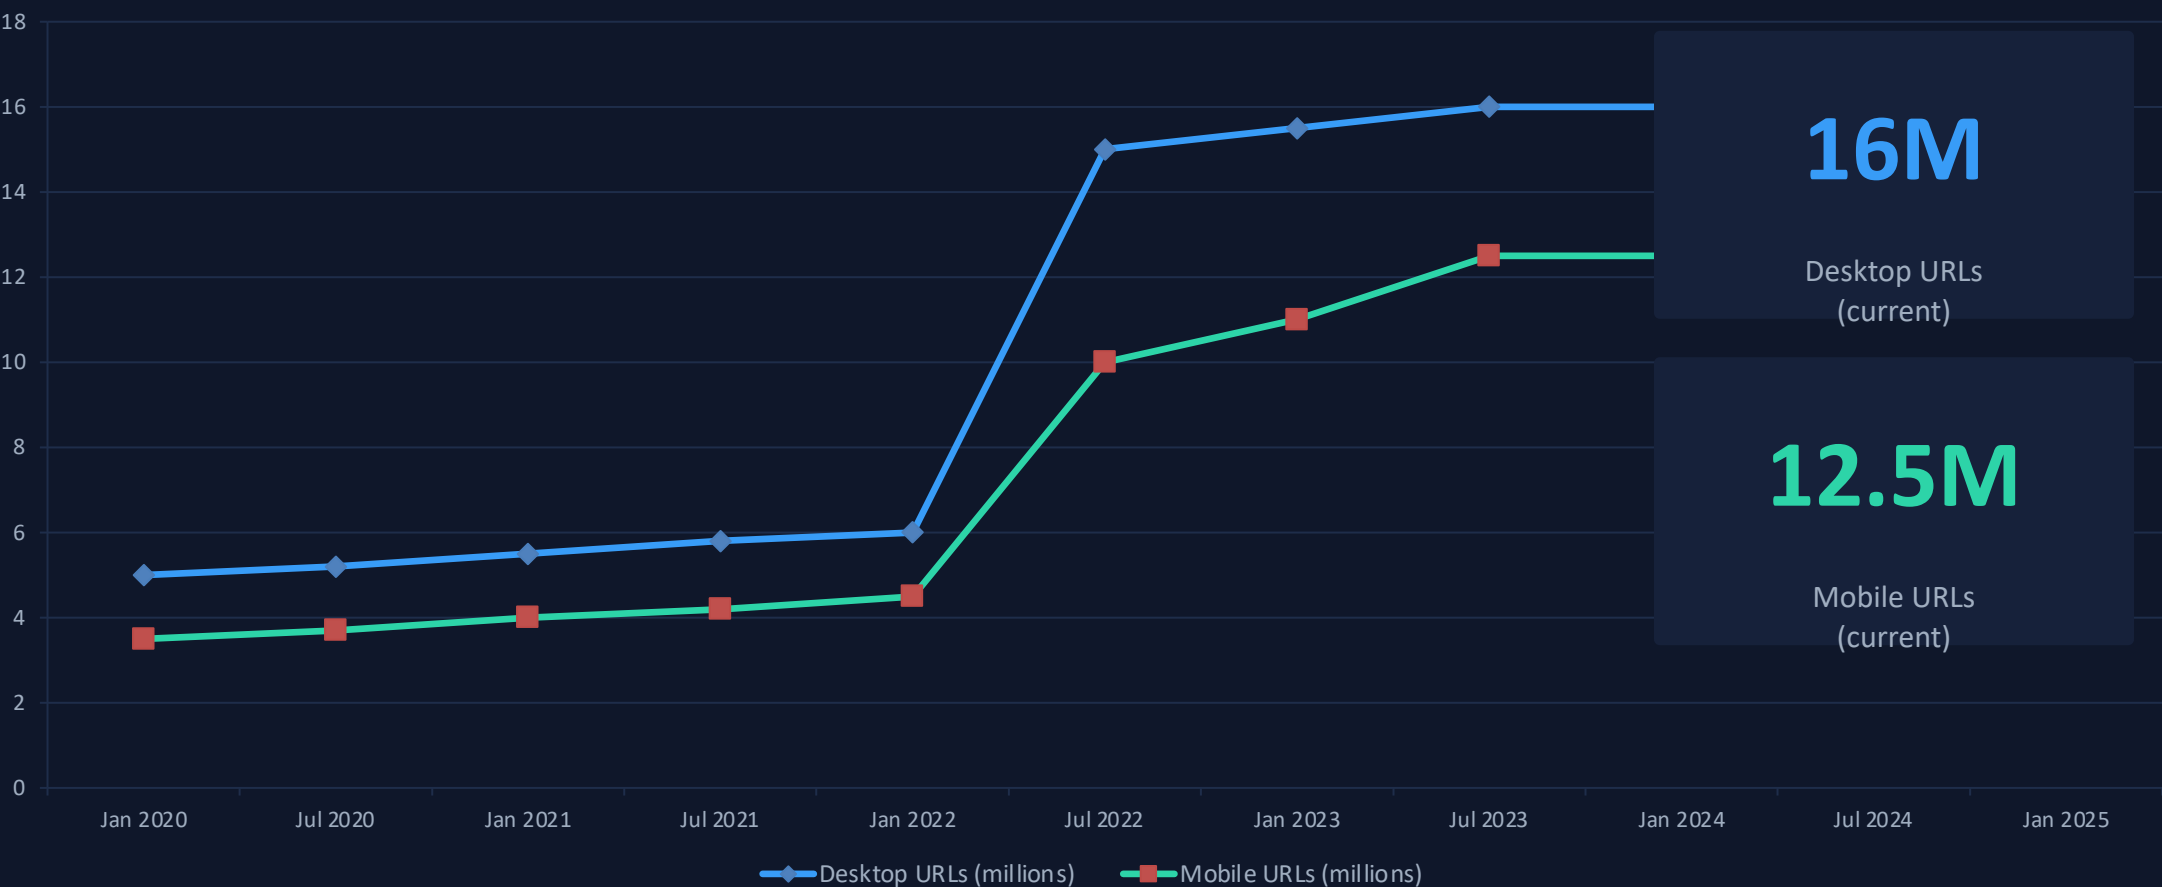

HTTP Archive Trends in Page Weight, Protocols, and Security

Data source: HTTP Archive · Jan 2020 – Mar 2026 · Desktop & Mobile crawls

For web performance engineers and front-end architects

Crawl Sample Size Tripled

From ~5M to 16M desktop URLs since 2020 · Sharp jump mid-2022, plateau by mid-2023

Median Page Weight Climbs Steadily to ~2,000 KB

Desktop median up ~25% from ~1,600 KB in 2020 · 75th percentile exceeds 4,000 KB

HTTPS Requests Reach 99%: Encryption Is Now the Default

Up ~19–20 percentage points from ~80% in 2020 · Plaintext HTTP is effectively gone

99%+

of all requests now use HTTPS

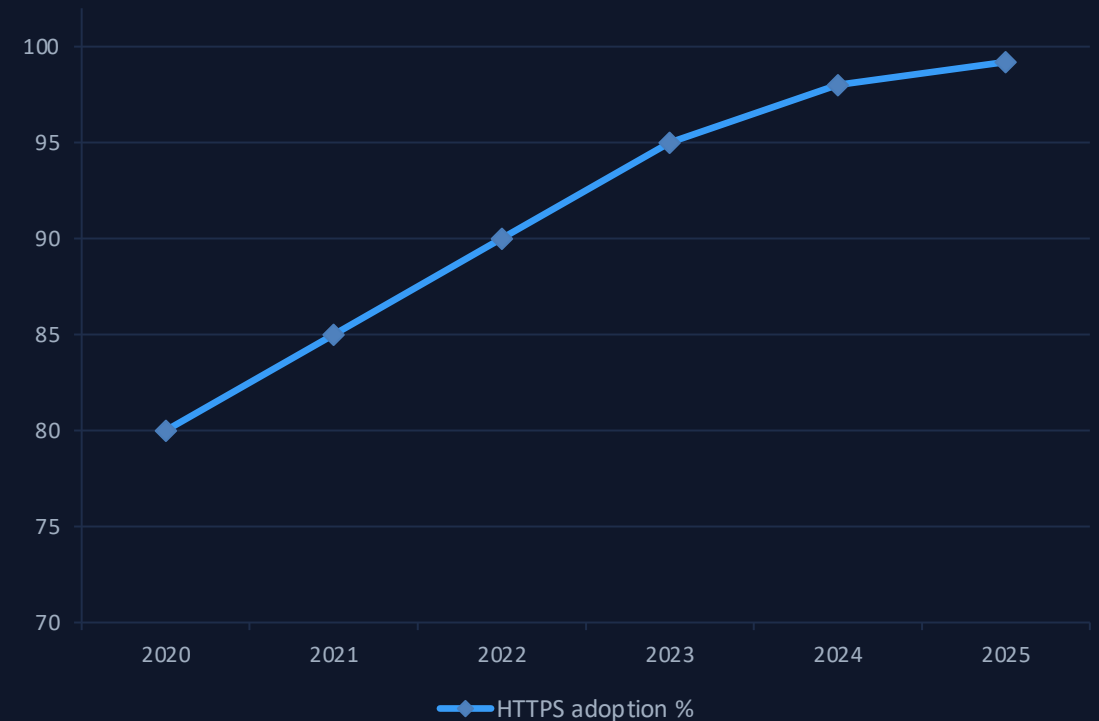

99.2%

Desktop

99.1%

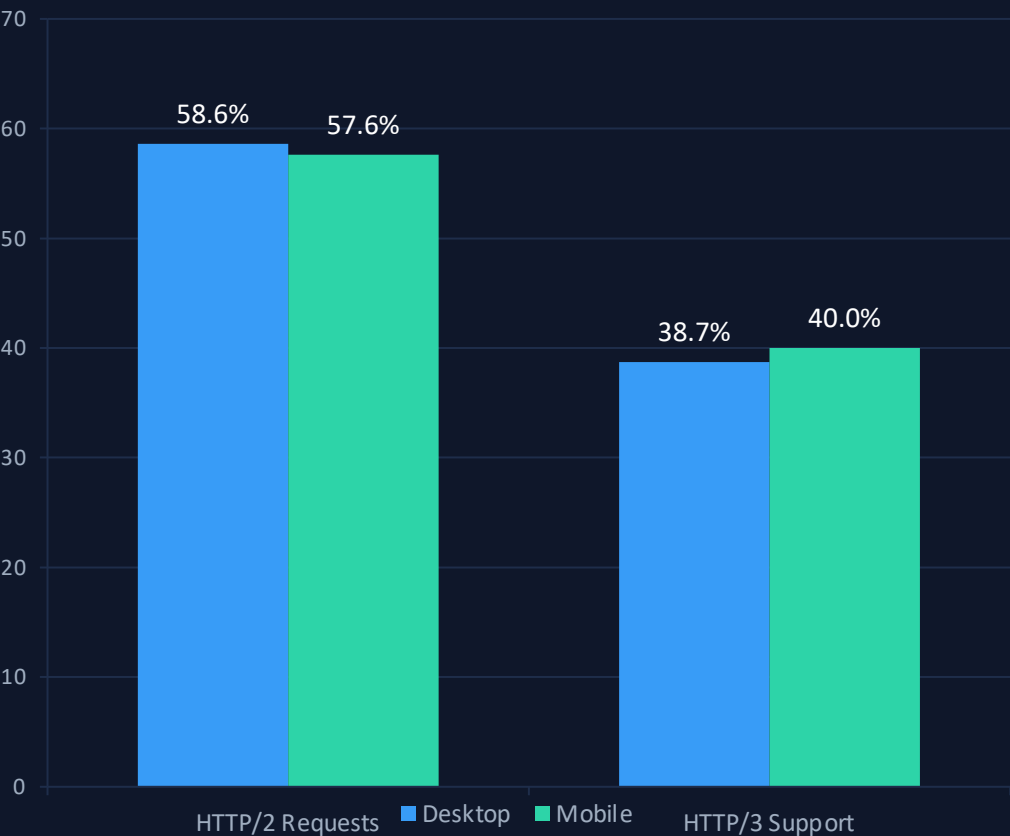

Mobile

HTTPS adoption %

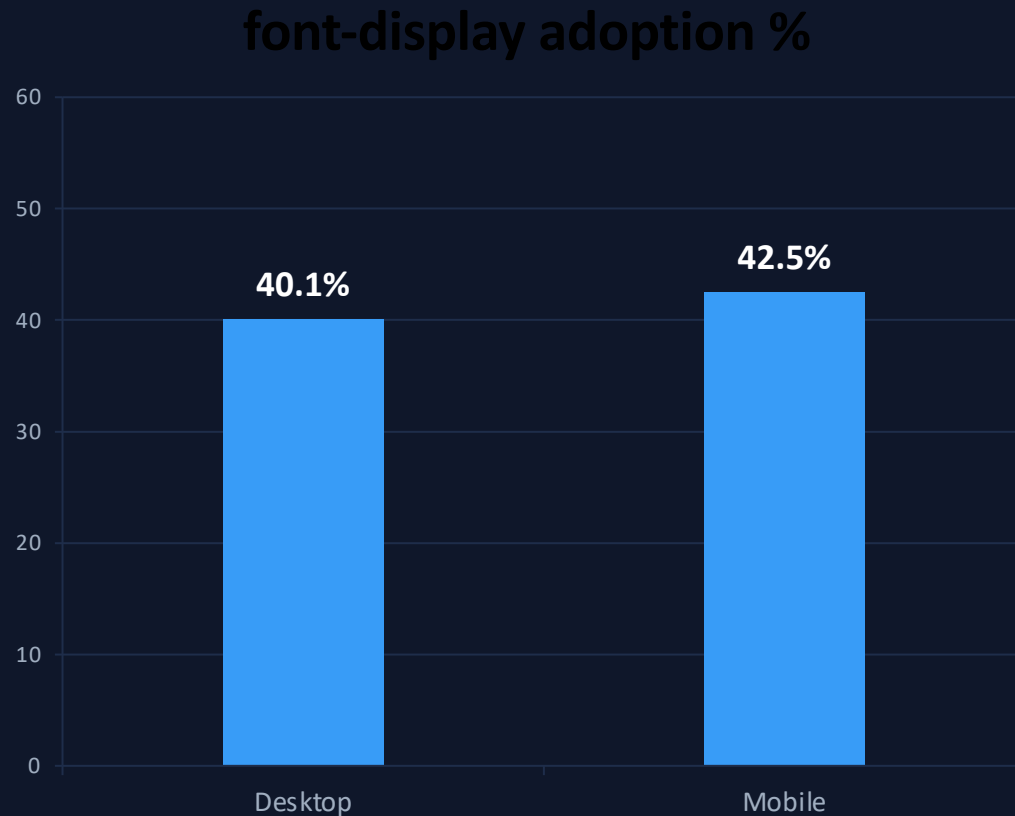

HTTP/2 Holds at ~58% While HTTP/3 Support Surges to 40%

HTTP/3 from near-zero to ~40% in under 4 years · Measured as support, not actual usage

Font-Display Usage Reaches 42% on Mobile

Up 61% on mobile and 14.9% on desktop since 2020 · Over half of pages still risk FOIT

WHAT IS FONT-DISPLAY?

The font-display CSS property controls how web fonts render during loading. It helps avoid the Flash of Invisible Text (FOIT) that degrades perceived performance.

Mobile growth

Key Takeaways

Bigger pages, smarter protocols, stronger security

Page weight keeps climbing

Median desktop pages now transfer ~2,000 KB, roughly 25% heavier than in 2020, driven by richer media and JavaScript.

HTTPS is the new baseline

At 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web.

HTTP/3 is the fastest-growing protocol metric

From near-zero to ~40% support in under four years, HTTP/3 is rapidly becoming mainstream.

Fewer connections despite more requests

Multiplexing in HTTP/2 and HTTP/3 has cut median connections per page by 15–27%.

Font-display still underused
