

STATE OF THE WEB 2020 – 2025

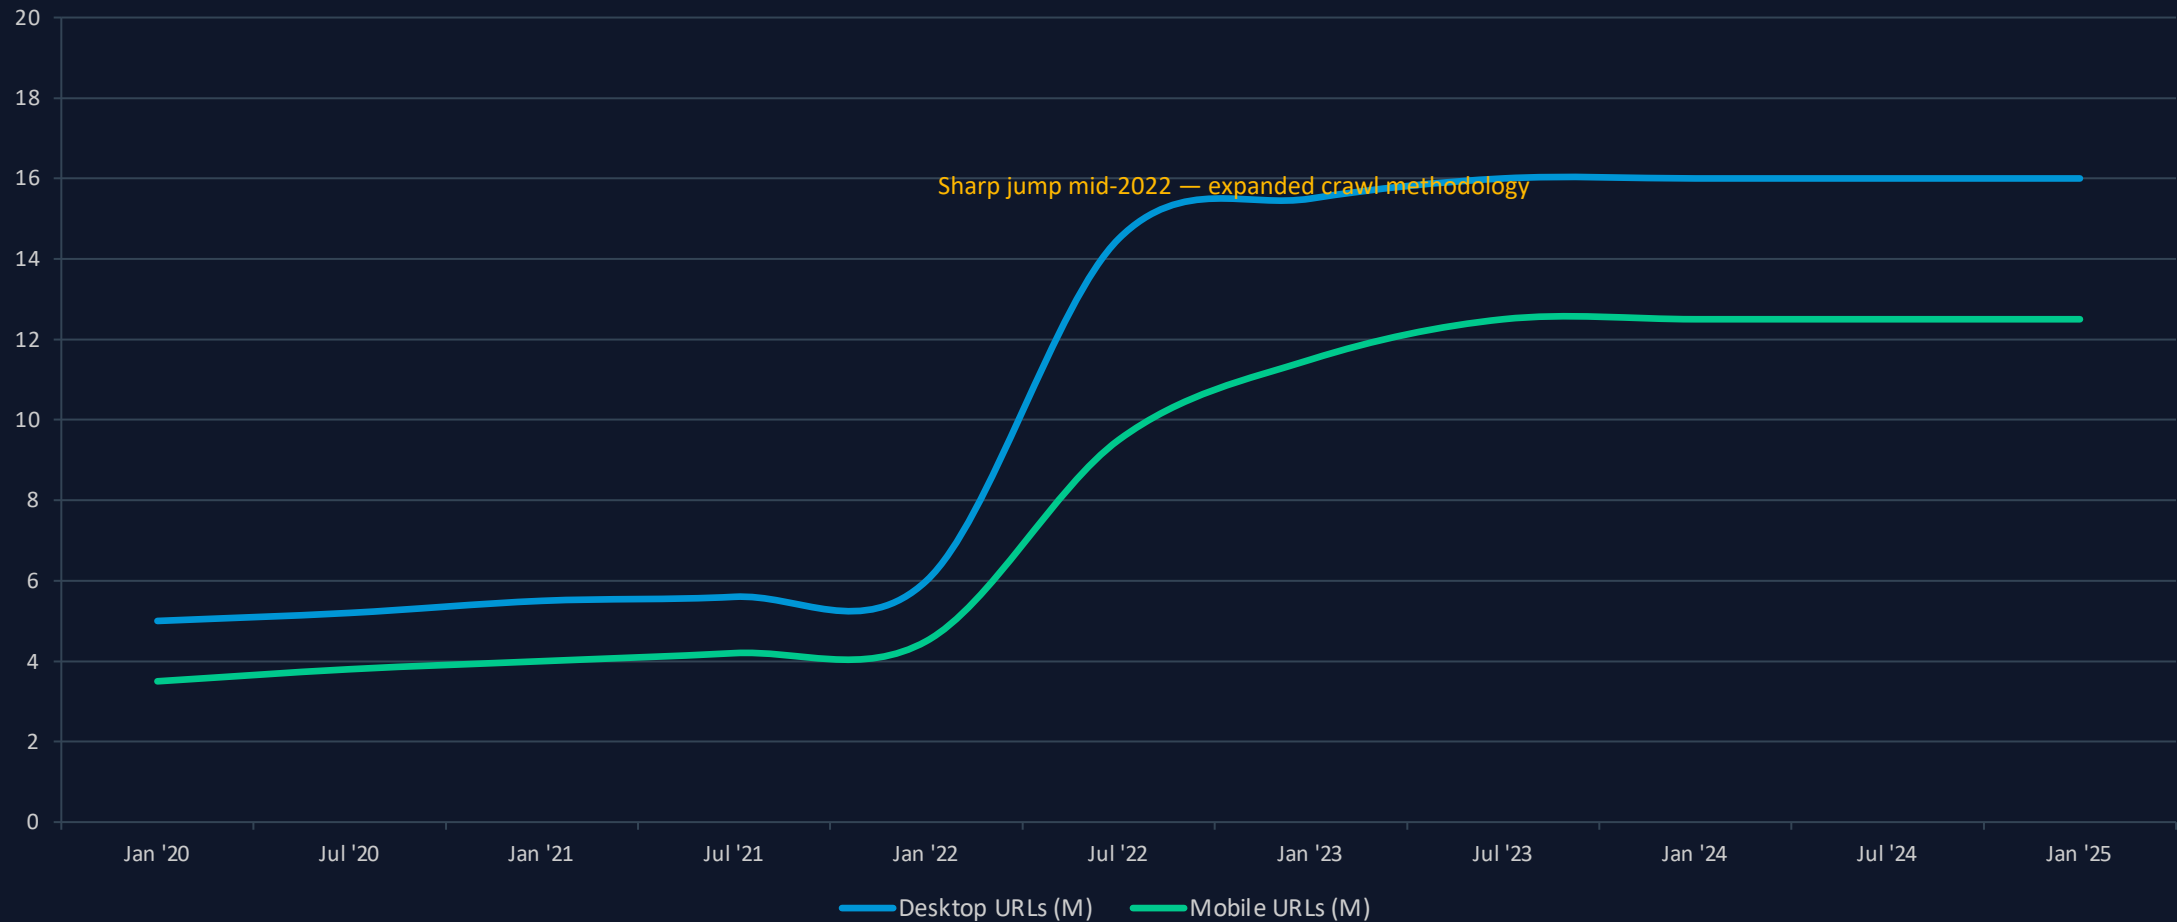

Tracking Page Weight, Protocols & Security at Scale

Data Source: HTTP Archive | Jan 2020 – Mar 2026

Audience: Web Performance Engineers & Front-End Architects

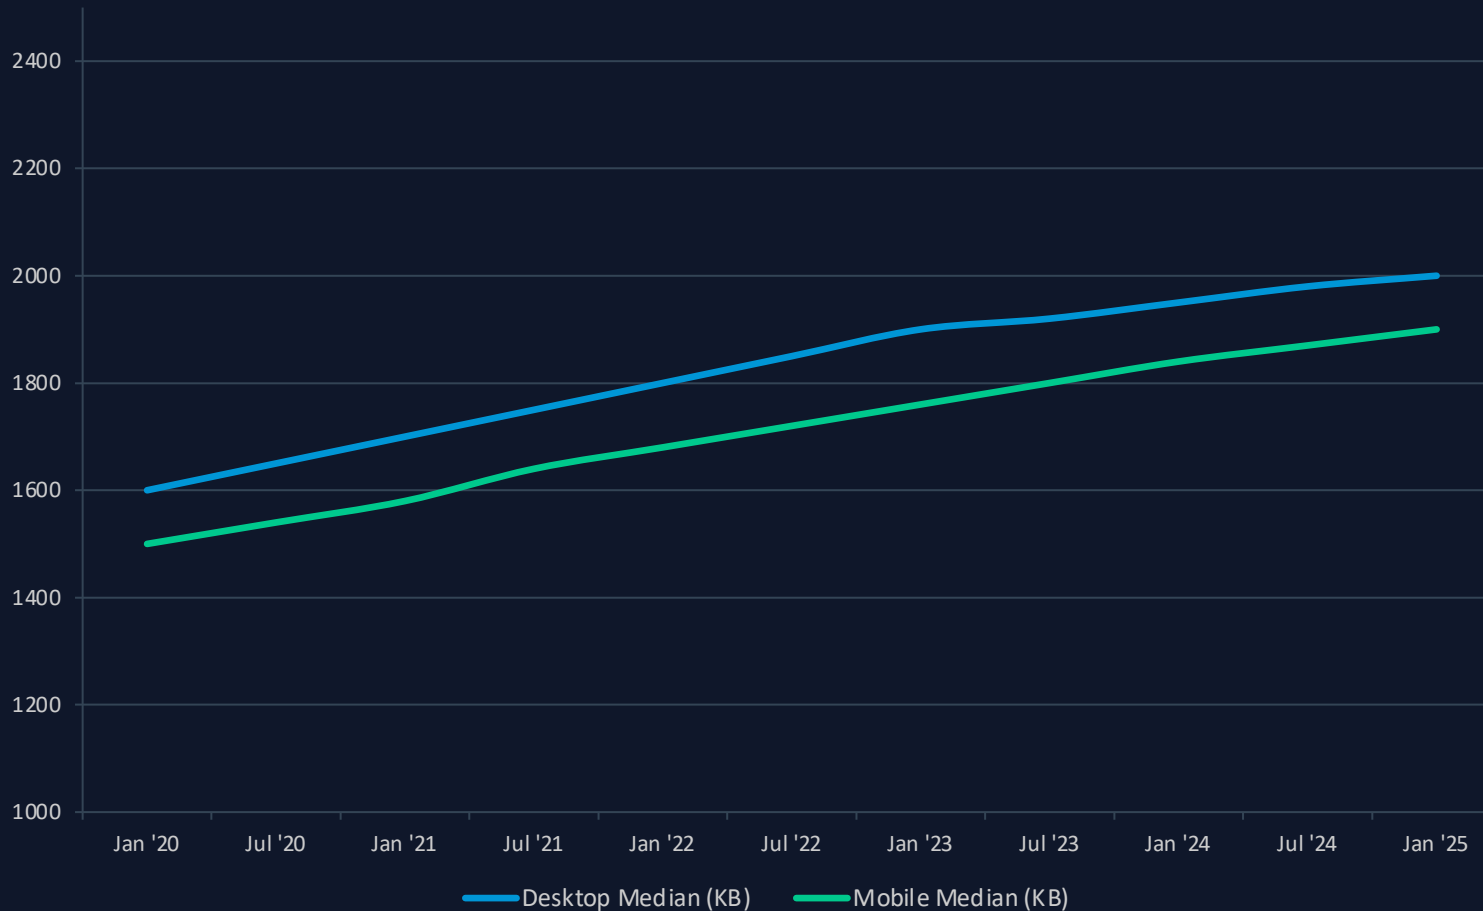

Crawl Sample Size Tripled

From ~5 M to 16 M Desktop URLs Since 2020

Median Page Weight Climbs to ~2,000 KB

Desktop median up ~25 % since 2020 | 75th percentile exceeds 4,000 KB

~2,000 KB

Desktop Median

~1,900 KB

Mobile Median

75th pctl desktop > 4,000 KB

76 Requests per Desktop Page While TCP Connections Drop

Multiplexing in HTTP/2 & HTTP/3 cuts connections despite rising request counts

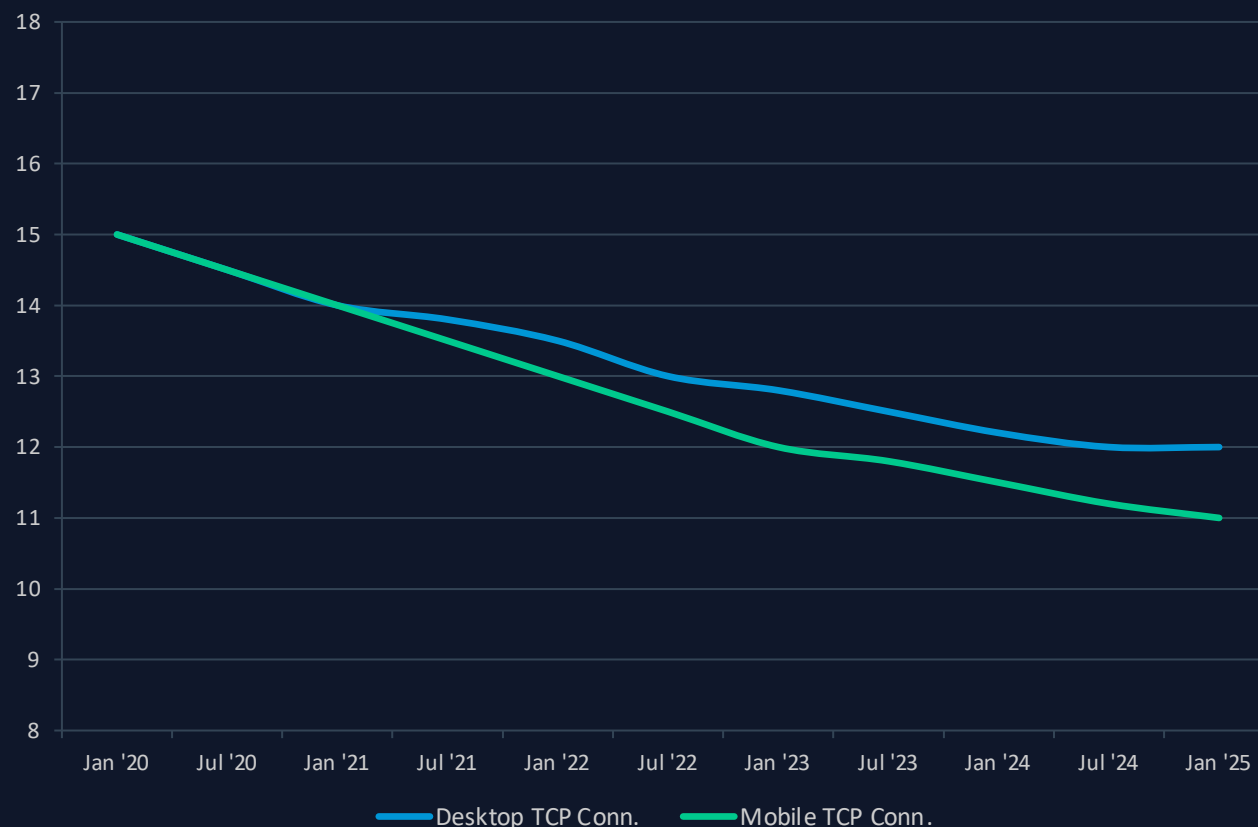

76

Desktop Requests / Page

71

Mobile Requests / Page

Both up ~3 % since 2020

Desktop ▼ 14.3 % | Mobile ▼ 26.7 %

HTTPS Requests Reach 99 %

Encryption is now the default — plaintext HTTP is effectively extinct

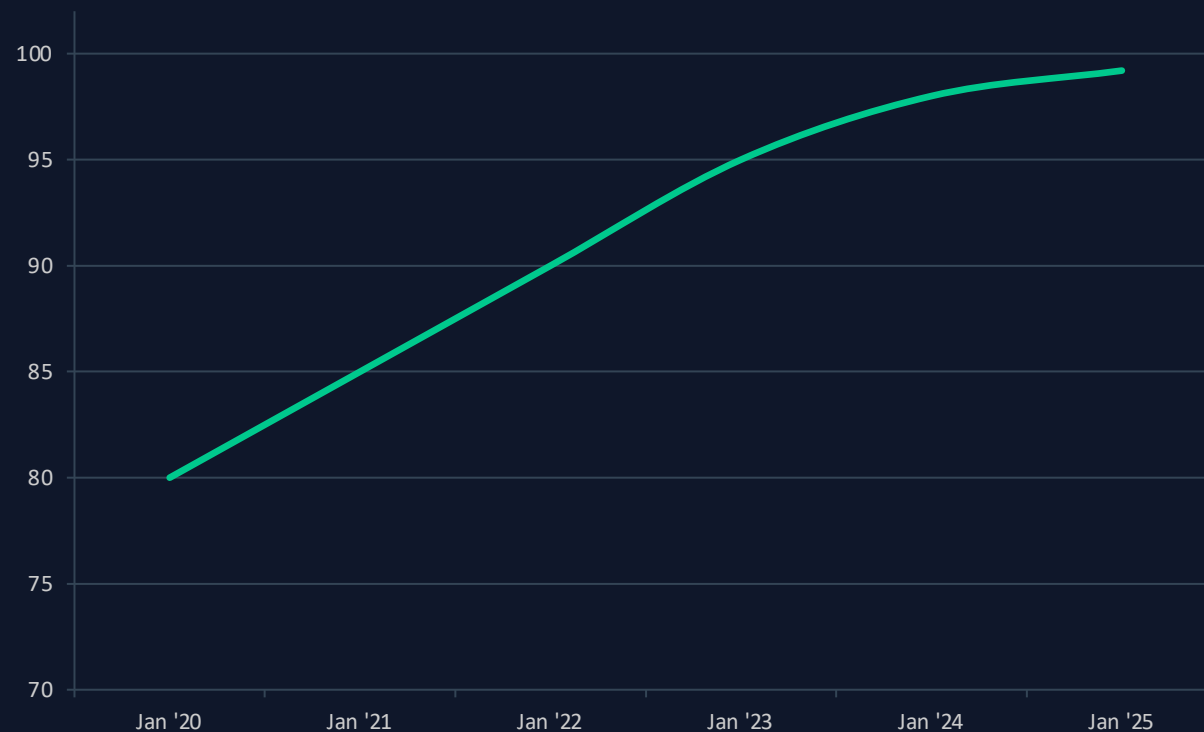

99 %+

of all requests now use HTTPS

Desktop 99.2 % | Mobile 99.1 %

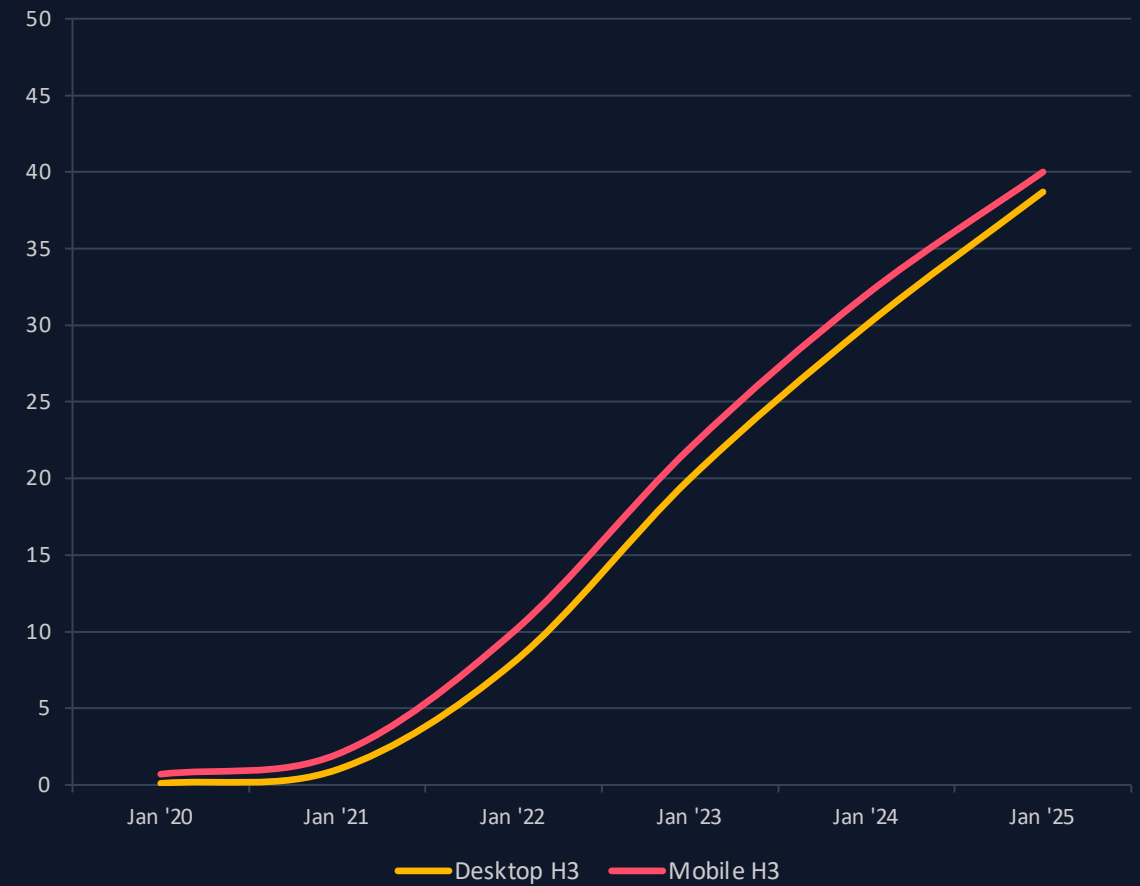

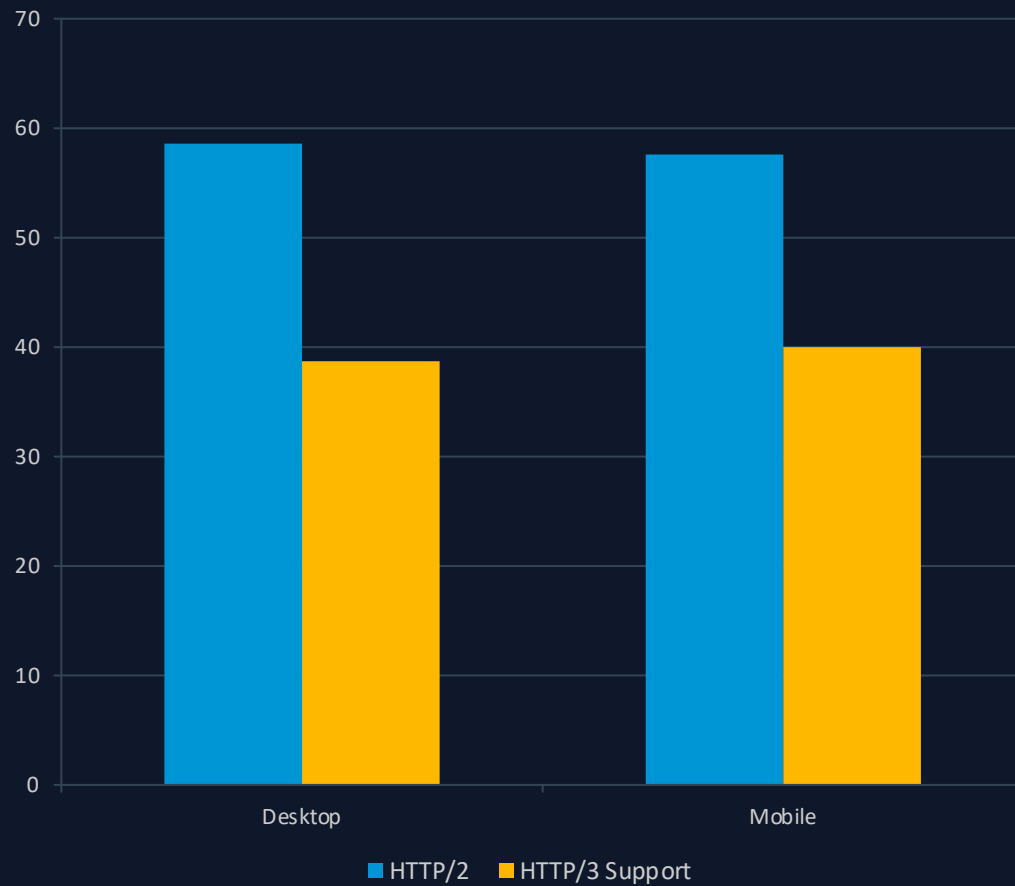

Up ~19 – 20 pp from ~80 % in early 2020

HTTPS %

HTTP/2 Holds at ~58 % While HTTP/3 Support Surges to 40 %

HTTP/3 support grew from near-zero — fresh Chrome instances default to HTTP/2 before discovering HTTP/3 via Alt-Svc

HTTP/3 support time-series

font-display Usage Reaches 42 % on Mobile

Up 61 % (mobile) and 14.9 % (desktop) since 2020 | Avoids Flash of Invisible Text (FOIT)

40.1 %

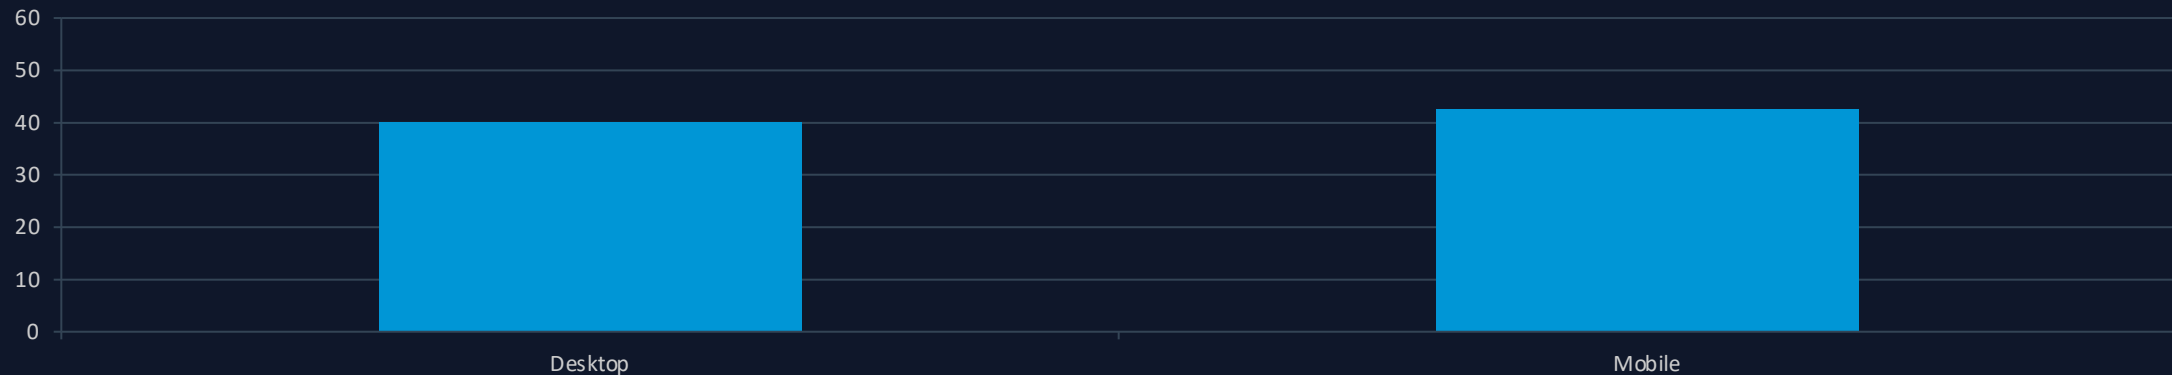

Desktop Adoption

42.5 %

Mobile Adoption

More than half of pages still risk FOIT during web font loading

font-display adoption %

Key Takeaways

Bigger Pages, Smarter Protocols, Stronger Security

Page weight keeps climbing

Median desktop pages transfer ~2,000 KB — roughly 25 % heavier than 2020, driven by richer media and JavaScript.

HTTPS is the new baseline

At 99 %+ of requests, unencrypted HTTP is essentially extinct on the modern web.

HTTP/3 is the fastest-growing metric

From near-zero to ~40 % support in under four years, HTTP/3 is rapidly becoming mainstream.

Fewer TCP connections despite more requests

Multiplexing in HTTP/2 and HTTP/3 has cut median connections per page by 15 – 27 %, improving network efficiency.

font-display still underused

At ~40 – 42 % adoption, significant room remains for improvement in avoiding invisible text during font loading.
