HTTPS Requests Reach 99%

Encryption Is Now the Default — Plaintext HTTP Is Extinct

99%+

of requests use HTTPS

Desktop: 99.2% | Mobile: 99.1%

HTTPS %

+19-20%

~0%

Plaintext HTTP

HTTP/2 Holds at ~58% While HTTP/3 Surges to 40%

Protocol Adoption: The Multiplexing Revolution

~58%

Note: HTTP Archive measures HTTP/3 support (not usage) via fresh Chrome instances defaulting to HTTP/2

HTTP/2 Requests

Relatively flat

40%

HTTP/3 Support

Fastest growing

38,600%

Desktop Growth

From near-zero

Font-Display Usage Reaches 42% on Mobile

Up 61% Since 2020 — FOIT Avoidance Still Room to Grow

Source: HTTP Archive via Lighthouse — font-display CSS property adoption

40.1%

Desktop Adoption

42.5%

Mobile Adoption

>50%

Still at Risk

No font-display

Key Takeaways: Bigger Pages, Smarter Protocols, Stronger Security

1 Page weight continues to grow

Median desktop pages now transfer ~2,000 KB, ~25% heavier than 2020, driven by richer media and JavaScript

2 HTTPS is effectively universal

At 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web

3 HTTP/3 is the fastest-growing metric

From near-zero to ~40% support in under four years — rapidly becoming mainstream

4 TCP connections declining via multiplexing

HTTP/2 and HTTP/3 have cut median connections per page by 15–27%, improving network efficiency

5 Font-display still underused

At ~40–42% adoption, significant room for improvement in avoiding invisible text (FOIT)

Call to Action: Benchmark your own sites against these HTTP Archive baselines to identify optimization opportunities
