

State of the Web 2020–2025: HTTP Archive Trends in Page Weight, Protocols, and Security

Data Source: HTTP Archive

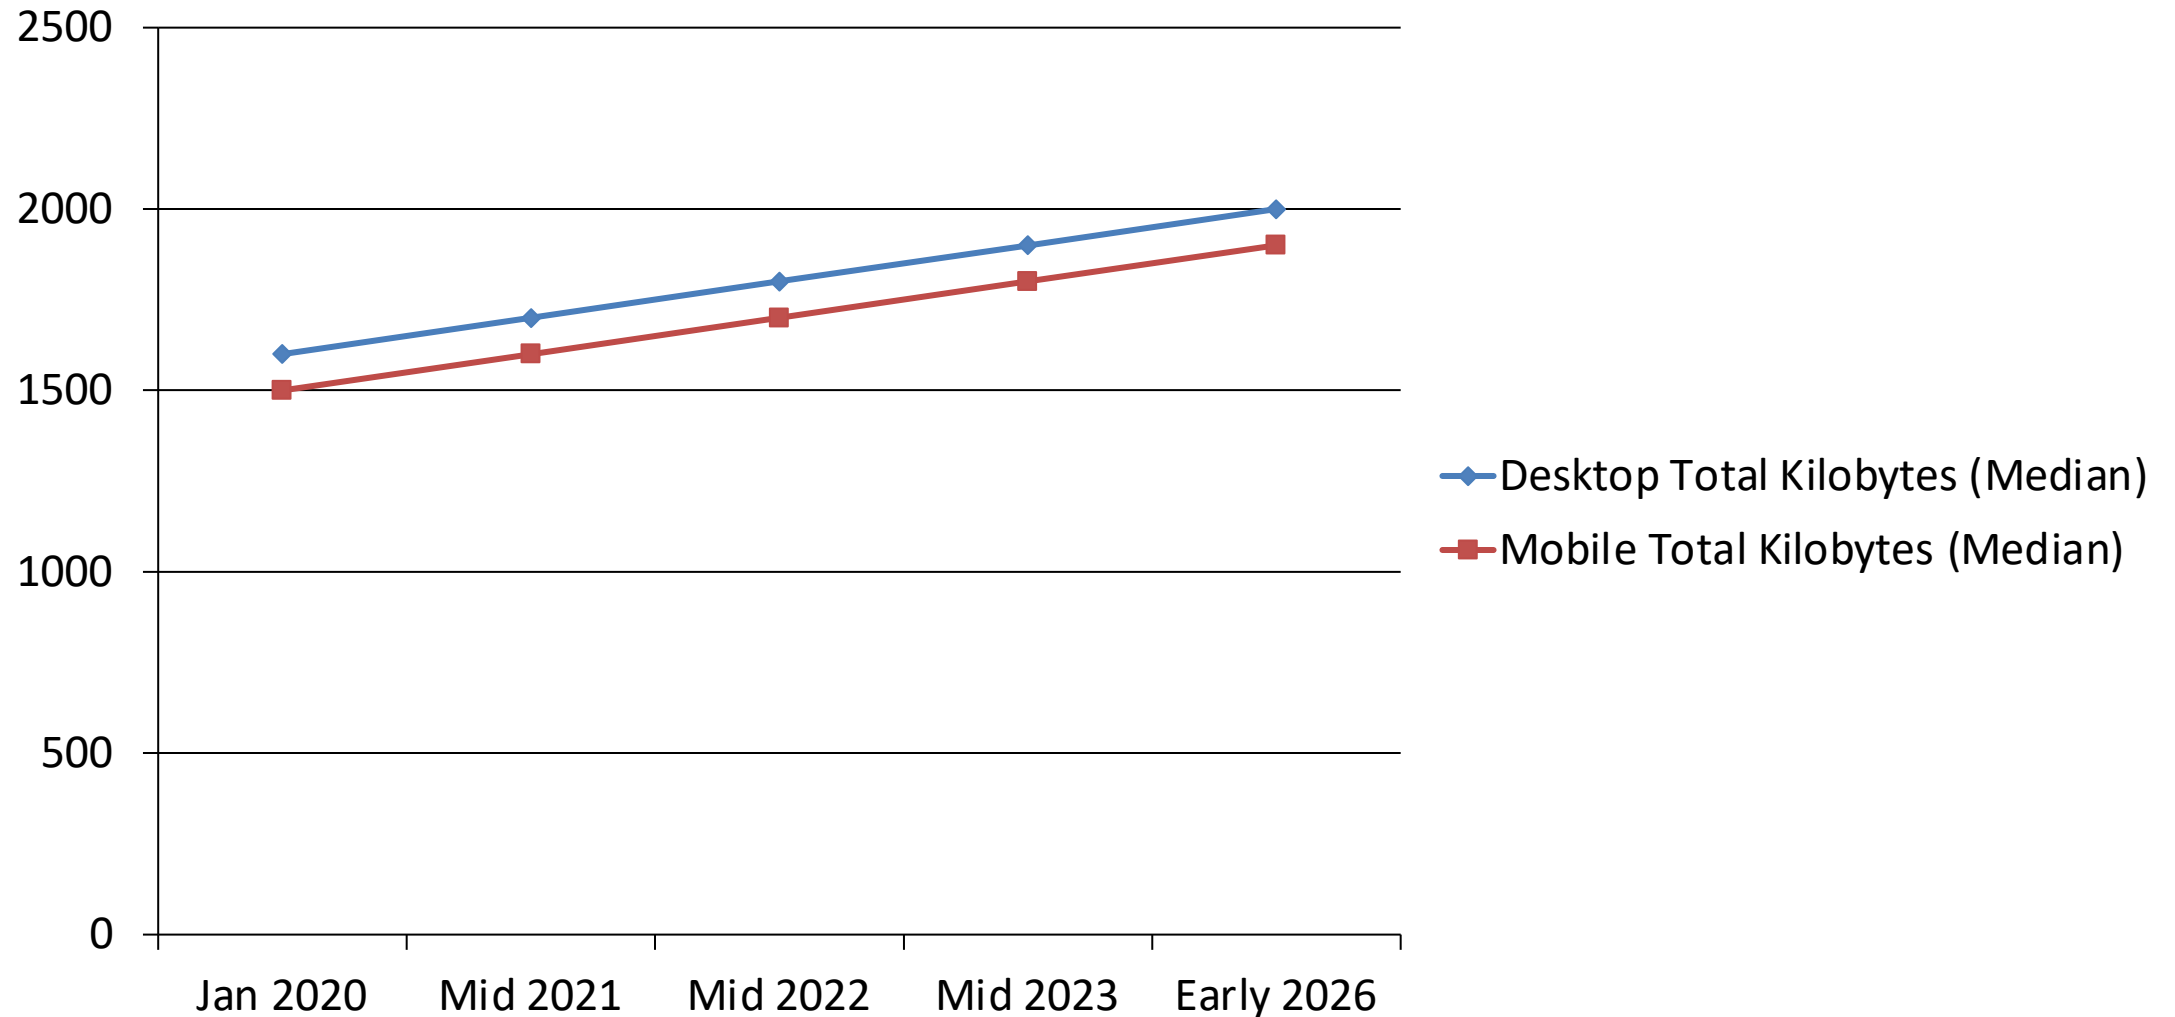

Time Range: January 2020 – Early
2026

Audience: Web Performance
Engineers & Architects

Crawl Sample Size Tripled: From ~5M to 16M Desktop URLs Since 2020

Median Page Weight Climbs Steadily to ~2,000 KB on Desktop

76 Requests per Desktop Page While TCP Connections Drop to 12

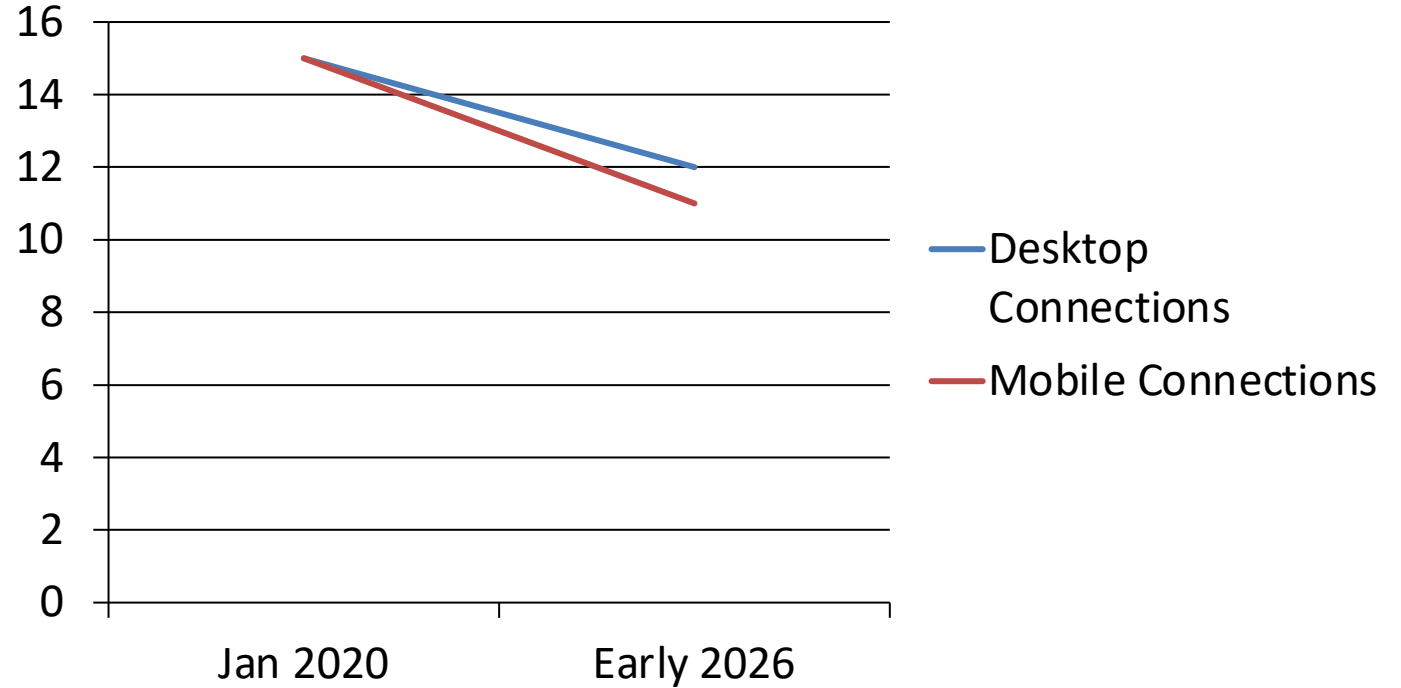

Desktop Requests
(up 2.7%)

76

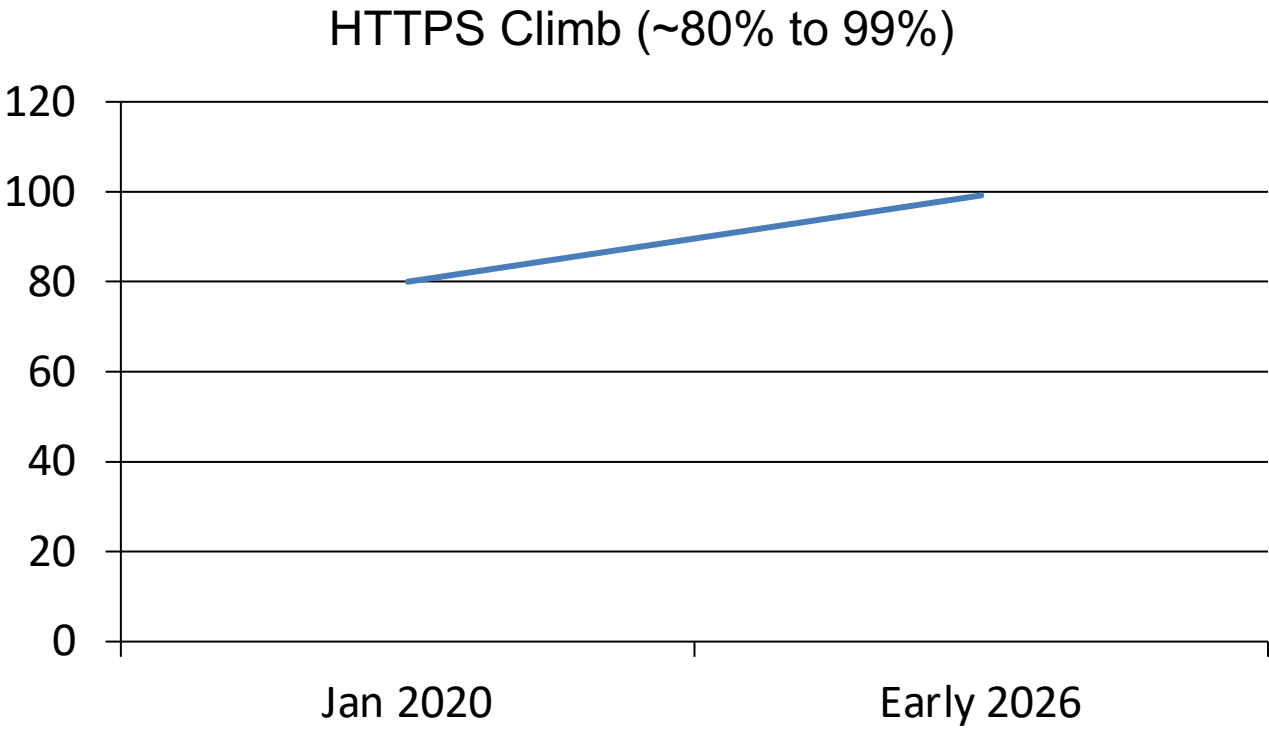

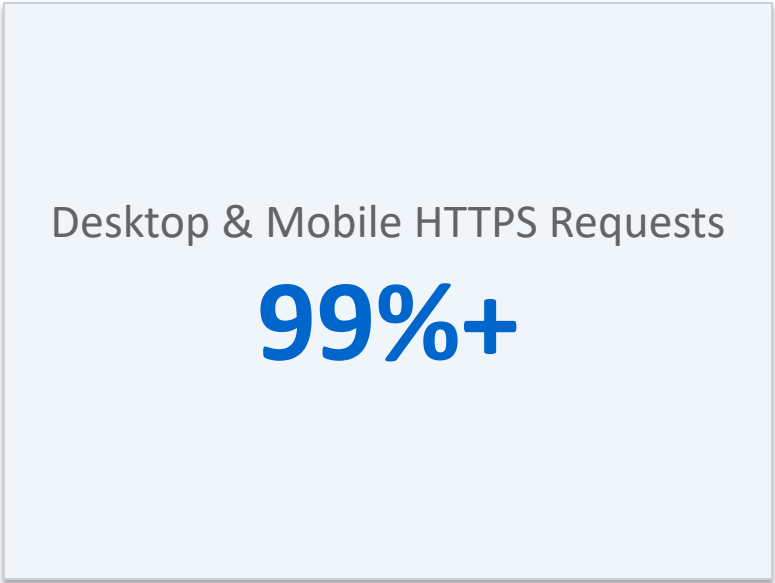

Mobile Requests
(up 2.9%)

71

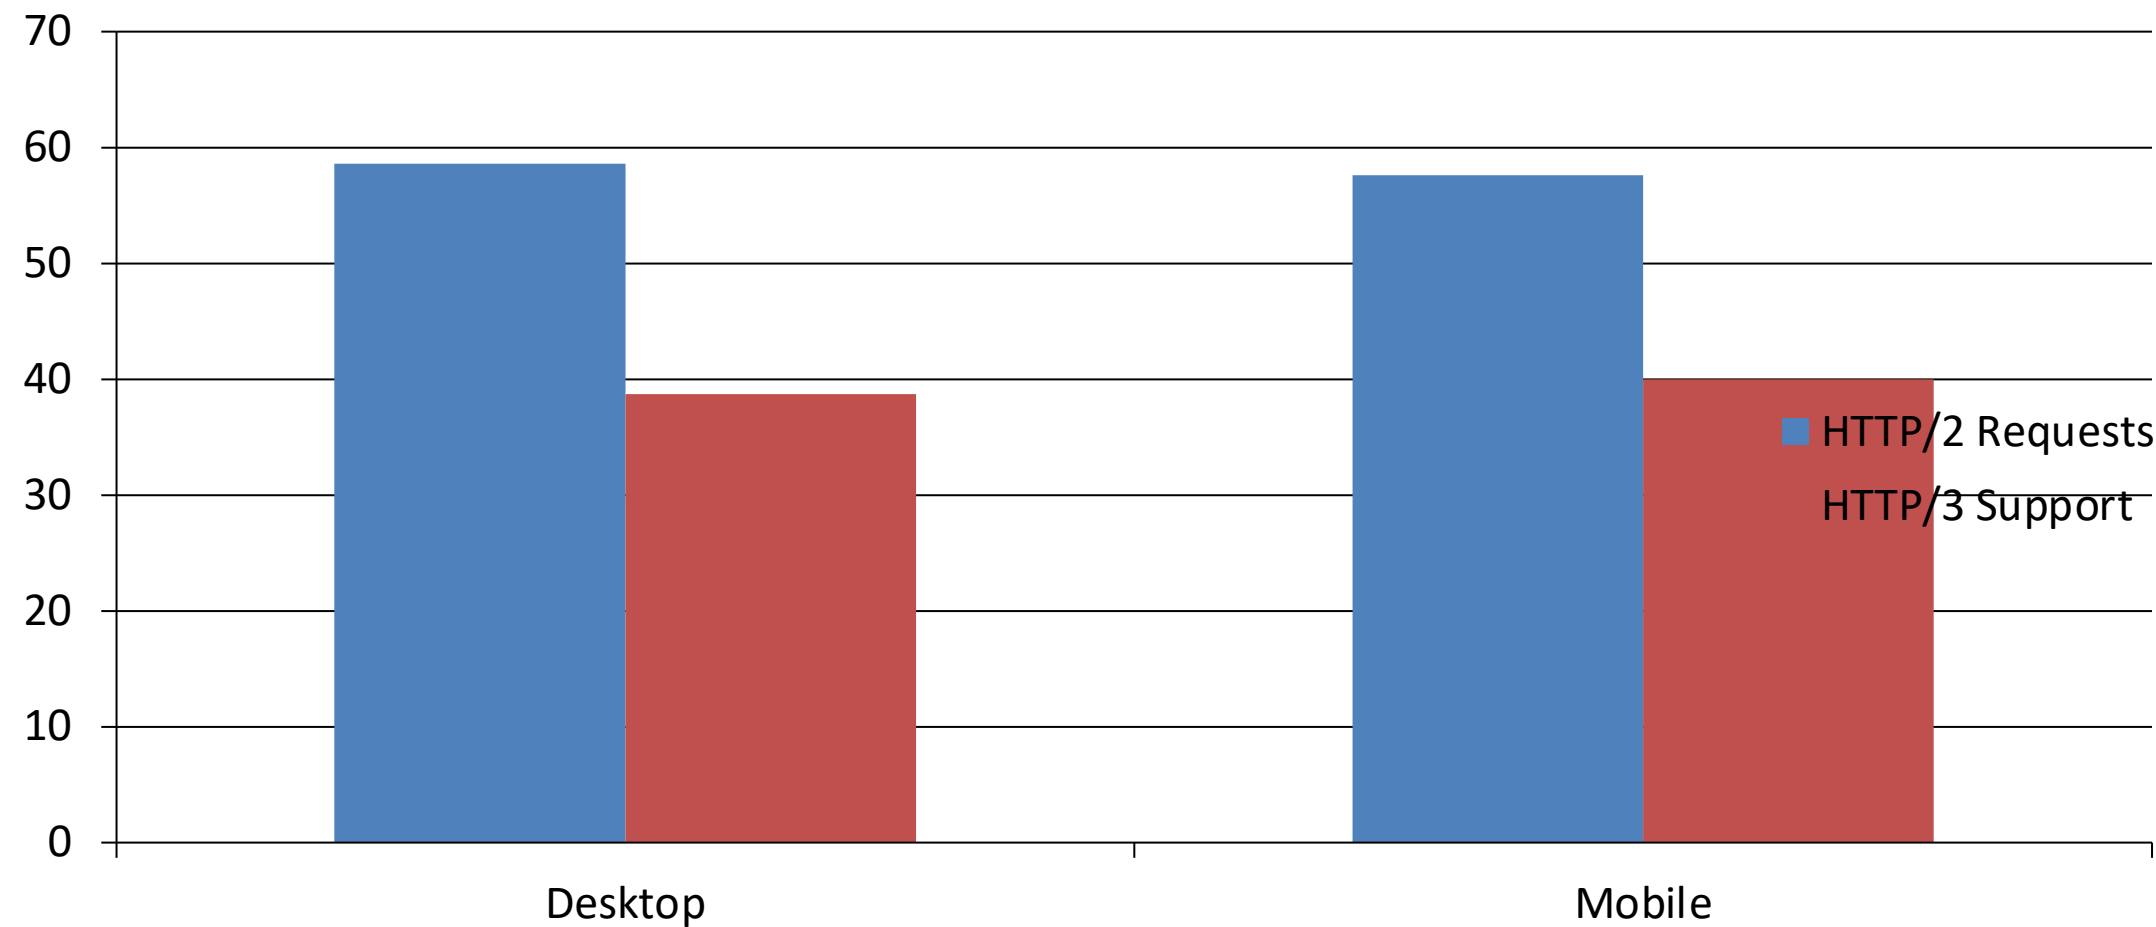

Median TCP Connections Per Page (Multiplexing Gains)

HTTPS Requests Reach 99%: Encryption Is Now the Default

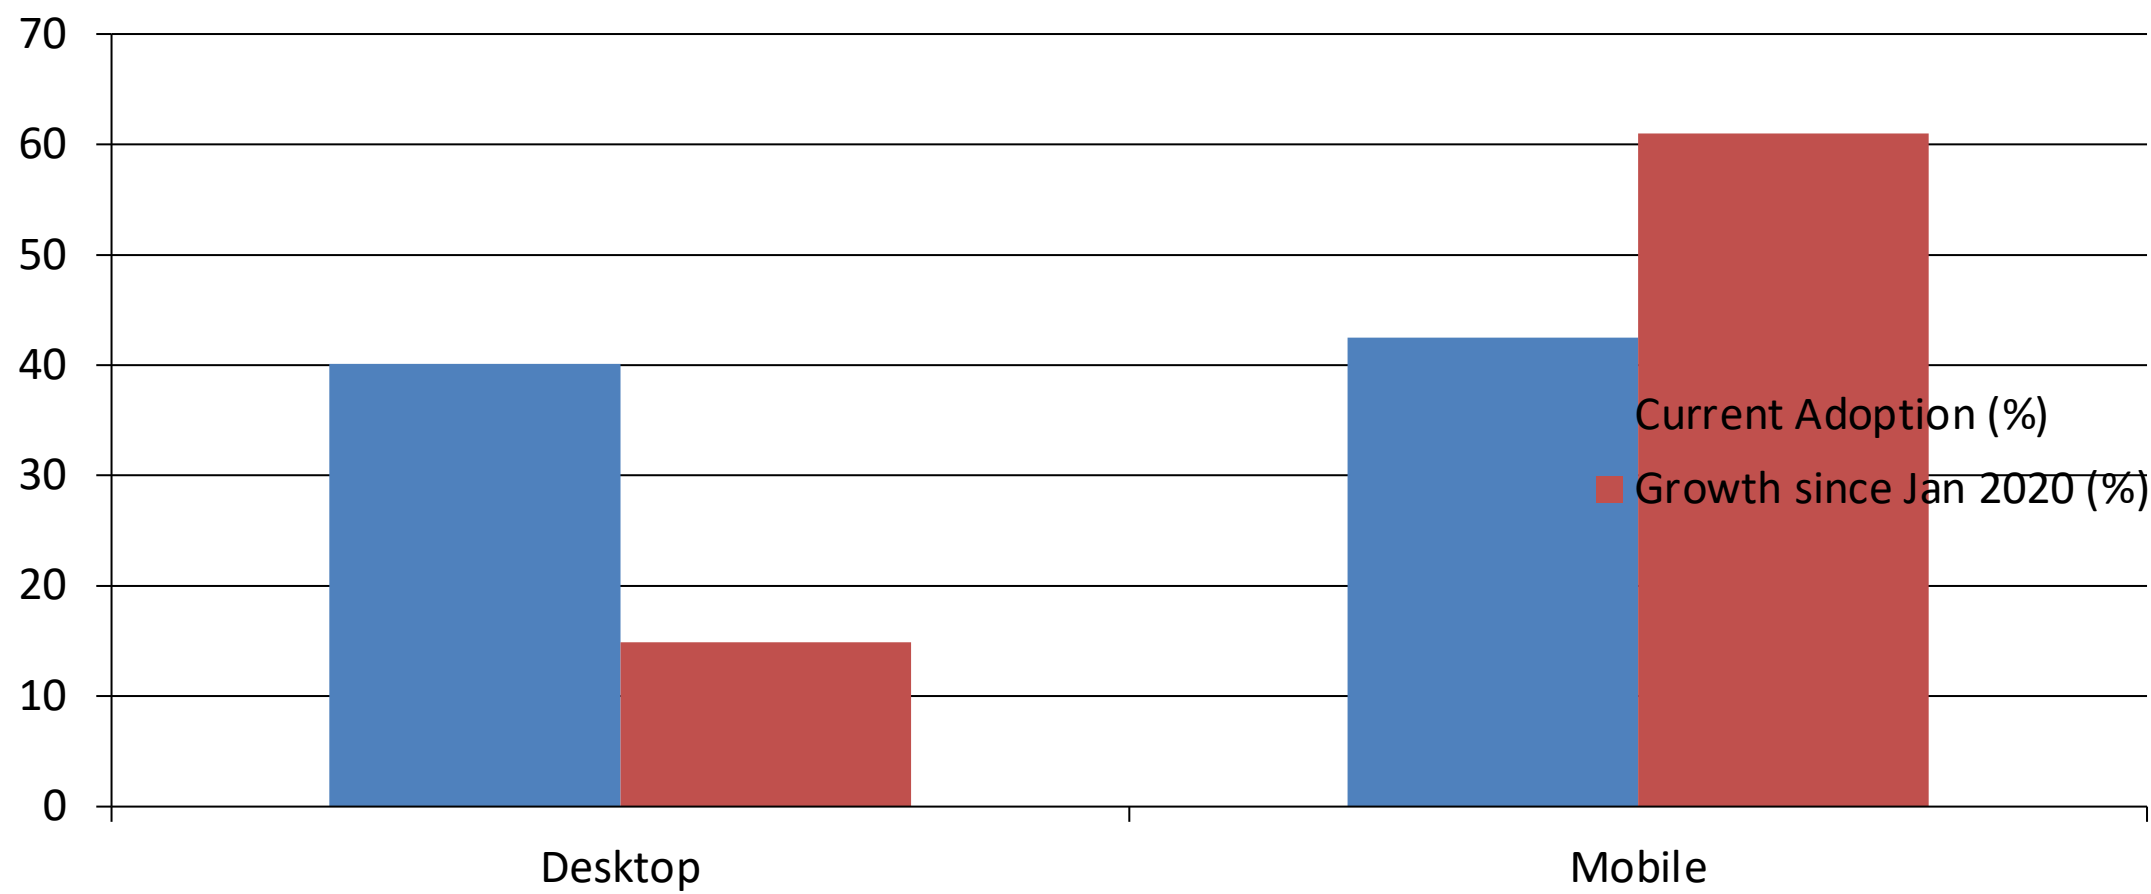

HTTP/2 Holds at ~58% While HTTP/3 Support Surges to 40%

Font-Display Usage Reaches 42% on Mobile, Up 61% Since 2020

Avoids Flash of Invisible Text (FOIT) during web font loading.

Key Takeaways: Bigger Pages, Smarter Protocols, Stronger Security

- Page weight keeps climbing: Median desktop pages now transfer ~2,000 KB, roughly 25% heavier than in 2020.
- HTTPS is the new baseline: At 99%+ of requests, unencrypted HTTP is essentially extinct.
- HTTP/3 is the fastest-growing protocol metric: Surging from near-zero to ~40% support.
- Fewer TCP connections despite more requests: Multiplexing in HTTP/2 and HTTP/3 cut median connections by 15-27%.
- Font-display still underused: At ~40-42% adoption, significant room for improvement to avoid invisible text.
- **ACTION: Benchmark your sites against these baselines to identify and prioritize optimization efforts.**
