

Global CO₂ Emissions: Who Emits, How Much, and What's Changing

Fossil fuels & industry, 1750–2024

Data: Global Carbon Budget 2025 via
Our World in Data

Prepared for policy analysts, climate
negotiators, and sustainability
researchers

Global CO₂ Emissions Grew from 6 Bt in 1950 to Over 35 Bt Today

Europe and the US Fell from 90% of Emissions in 1900 to Under One- Third Today

China Now Emits More Than One-Quarter of Global CO₂

Per Capita Emissions Range from 0.1 t in Chad to ~14 t in the US and Canada

Note: A ~150x gap exists between the poorest Sub-Saharan nations (0.1 t) and highest emitting large nations (~14-15 t). European nations like

Per Capita Emissions Vary Widely: ~14 t in the US vs. ~9 t in China and ~2 t in India

China's per capita emissions remain below the US despite being the largest total emitter. India remains very low at ~2 t. (Ref: figure_8.jpg for h

2024 Snapshot: Many Western Nations Cut Emissions While Parts of Asia and Africa Grew

[Placeholder: Diverging Bar Chart / Map showing 2024 Annual % Change]

Decreases (Blue): US, EU, UK

Increases (Red/Orange): Russia, Southeast Asia, Africa, Central Asia (>10%)

Energy Mix Explains Why France and the UK Emit Far Less Per Capita Than Germany or the US

- Among wealthy nations with similar prosperity levels, per capita emissions vary significantly because of energy mix choices.
- France, the UK, and Portugal have much lower per capita emissions than Germany, the Netherlands, or the US.
- This is largely because a higher share of their electricity comes from nuclear and renewable sources rather than fossil fuels.
- Per Capita Comparisons:
 - US: ~14 t

Key Takeaways: Responsibility Is Shared but Unequal

- • Global emissions exceed 35 Bt/yr and haven't peaked.
- • China is the largest annual emitter but per capita is still below the US.
- • Historical responsibility is dominated by Europe and the US.
- • Per capita gaps of 150x persist between richest and poorest nations.
- • Energy policy and technology choices can decouple prosperity from emissions.
