

Ultra Sound Money

Ethereum's Post-Merge Supply Dynamics
and Monetary Premium

Current Supply: 121,603,980 ETH | Gas: 0.1 Gwei | ETH Price: \$2,243

A data-driven analysis for crypto-native investors

ETH Supply Growing at +0.83%/Year with Only 192 ETH Burned in 7 Days

121.6M ETH

Total Supply

+19,446 ETH

7-Day Net Issuance

0.01x

Burn Offset Ratio

Annualized Rate: +0.83%/year | Supply: 121,603,980 ETH

Base Gas at Historic Lows: 0.1 Gwei Average Suppresses Fee Burn

GAS RANGE METER (7-DAY WINDOW)

BLOB GAS AVG

7,144,934 wei

BLOB FEE BURN (7 DAYS)

0.15 ETH (\$319)

Key Insight: Low Gas → Low Burn → Temporary Supply Inflation

ANALYSIS

- Current avg:
0.1 Gwei (historic low)
- Equilibrium requires:
~22 Gwei
- Today's burn:
~192 ETH/week
- Low gas → low burn →
mild inflation
- EIP-1559 intact;
activity is the lever

DeFi and ETH Transfers Account for 85% of Weekly Fee Burn

7-Day Burn by Category (ETH)

192 ETH

Total 7-Day Burn

21.7 ETH

#1 ETH Transfers

13.6 ETH

#2 Tether USDT

EIP-1559 destroys base fees forever

38.9M ETH Staked at 2.7% Issuance Rewards with Minimal Tips and MEV

Validator Reward Composition

38.9M ETH

Staked (32% of supply)

9.1M ETH

Locked in staking contracts

10.7 yrs

Avg validator lock duration

2,800 ETH/day

PoS Issuance Rate

~2,200 ETH/day

Fee Burn (normalized)

Long-Term Equilibrium Projected at 125.7M ETH with 1,037K ETH/Year Balance

125.7M ETH

Long-Term Equilibrium

22 Gwei

Avg Gas Required

1,037K ETH/yr

Issuance = Burn

ETH at 18.7% of Bitcoin's Market Cap, Securing \$272B in Native Value

Total Value Secured (\$307.6B)

Flipping Progress

TVS Breakdown

ETH: \$272.76B | ERC20: \$22.21B | NFTs: \$12.66B

Top ERC20 Tokens:

Dai \$4.41B | SHIB \$3.51B | CRO \$2.97B | XAUT \$2.65B

Top NFT Collections:

CryptoPunks \$2.13B | BAYC \$0.68B | ENS \$0.63B | Pudgy \$0.51B

Key Takeaways: Ultra Sound Money Thesis Intact but Gas Activity Is the Critical Variable

1

ETH is currently mildly inflationary at +0.83%/yr due to historically low gas.

Avg gas is just 0.1 Gwei, suppressing burn to only 192 ETH vs 19,638 ETH issued over 7 days.

2

The EIP-1559 burn mechanism works structurally — on-chain activity is the critical lever.

Sustained ~22 Gwei average gas is required to achieve deflationary dynamics.

3

38.9M ETH (32% of supply) is staked, creating significant supply lock.

Average staking duration is ~10.7 years with ~2.9% APR, reducing circulating supply pressure.

4

Long-term equilibrium is structurally sound at 125.7M ETH total supply.

Issuance and burn balance at ~1,037K ETH/year under normalized on-chain activity.

5

ETH has reached 18.7% of Bitcoin's market cap and secures \$307.6B+ in total value.

Demonstrating real but still early monetary premium in the broader crypto ecosystem.
