

Ultra Sound Money

Ethereum's Supply Dynamics & Monetary Thesis

Current Supply: 121,603,980 ETH | Price: \$2,243 | Gas: 0.1 Gwei

ETH Supply Growing at +0.83%/Year with Only 192 ETH Burned in 7 Days

Net 7-Day Change:
+19,445.89 ETH

Current Supply:
121,603,980 ETH

Issuance Offset Ratio:
0.01x

Base Gas at Historic Lows: 0.1 Gwei Average Suppresses Fee Burn

Current 7-Day Gas Market (Gwei)

Min: 0.0

Avg: 0.1

Max: 1.3

Blob Gas (EIP-4844) Context

Avg Blob Gas: ~7.1M wei

Blob Fees Burned: 0.15 ETH (\$319)

Equilibrium vs Reality

DeFi and ETH Transfers Account for 85% of Weekly Fee Burn

Top Burn Contracts (7-Day)

Contract	Burn (ETH)
ETH Transfers	21.74
Tether USDT	13.55
DeFi Contracts	Various

38.9M ETH Staked at 2.7% Issuance Rewards with Minimal Tips

Staking Overview

- Total Staked: 38.9M ETH
- Network Share: ~32% of Supply
- Scarcity Engine: 9.1M ETH locked
- Average Lock Time: 10.7 years

Validator Rewards Breakdown

Long-Term Equilibrium Projected at 125.7M ETH

Projection Parameters:

- 39M ETH Staked
- 22 Gwei Average Base Gas
- 2.8K ETH/day PoS Issuance
- 2.2K ETH/day Burn (at 22 Gwei)

ETH at 18.7% of Bitcoin's Market Cap, Securing \$272B Value

Flipping Progress

Asset	ETH Ratio
Bitcoin	18.70%
USD	1.30%
Gold	0.89%

Total Value Secured (TVS) - \$307.6B

Key Takeaways: Thesis Intact but Gas is Critical

- Inflation Reality: ETH is mildly inflationary (+0.83%/yr) due to historic low gas (0.1 Gwei
-

avg).

- Burn Mechanics: Base fee burn works but needs on-chain activity to balance 2.8K ETH/day issuance.
- Staking Lockup: 38.9M ETH staked (32%) acts as a massive structural supply sink.
- Sound Equilibrium: Projected 125.7M ETH cap holds firm under a normalized 22 Gwei scenario.
- Monetary Premium: \$307B TVS and 18.7% BTC ratio show ETH's growing role as a store of value.
