

Ultra Sound Money: Ethereum's Post-Merge Supply Dynamics and Monetary Premium

Supply mechanics post-merge • Burn vs issuance • Staking economics • Long-run equilibrium

CURRENT SUPPLY

121,603,980 ETH

BASE GAS (AVG)

0.1 Gwei

ETH PRICE

\$2,243

WINDOW

7D

ETH Supply Growing at +0.83%/Year with Only 192 ETH

Demanded in 7 Days

NET CHANGE (7D)

+19,445.89 ETH

ISSUED (7D)

+19,638.29 ETH

BURNED (7D)

-192.39 ETH

OFFSET

0.01x

7-Day Issuance vs Burn (ETH)

Current supply: 121,603,980 ETH

Annualized supply growth: +0.83%/year

Burns offset ~1% of issuance (0.01x) in this 7D window

Interpretation: low fee burn = temporarily inflationary regime

All figures from provided brief (7-day window).

Base Gas at Historic Lows: 0.1 Gwei Average Suppresses

GAS MIN
0.0 Gwei

GAS AVG
0.1 Gwei

GAS MAX
1.3 Gwei

BLOB BURN (7D)
0.15 ETH

Base Gas: Current vs 22 Gwei Assumption

EIP-1559 burns the base fee when blocks are
Low gas → low base fees → minimal burn
Blob gas (EIP-4844) averaged 7,144,934 wei; blob fee
0.15 ETH over 7D
Ultra sound dynamics require sustained on-chain de
(brief uses 22 Gwei for equilibrium modeling)

DeFi and ETH Transfers Account for 85% of Weekly Fee Burn

Category table + leaderboard entries from provided brief.

Total burned (7D): ~192 ETH

Largest categories: DeFi (31 ETH), ETH transfers (22 ETH)

Low absolute burn reflects current low-fee regime

Leaderboard highlights (7D):

- ETH transfers: 21.74 ETH
- Tether (USDT): 13.55 ETH
- Recent blocks show 0.00–0.01 ETH burn per block
- 7D burn record: 0.07 ETH in a single block

38.9M ETH Staked at 2.7% Issuance Rewards with Minimal Tips and MEV

ETH STAKED
38.9M ETH

STAKED SHARE
~32%

LOCKED
9.1M ETH

AVG LOCK
10.7 yrs

Reward Composition (APR)

Rewards dominated by protocol issuance (2.7%)
Tips (~0.1%) and MEV estimate (~0.1%) are minimal
regime

Staking lock-up is a structural supply sink (9.1M ETH
years)

Long-Term Equilibrium Projected at 125.7M ETH with

1,037K ETH/Year Issuance Burn Balance

EQUILIBRIUM

125.7M ETH

STAKED (MODEL)

39M ETH

GAS (MODEL)

22 Gwei

BALANCE

1,037K ETH/yr

Modeled 200-Year Supply Path Toward 125.7M ETH

Equilibrium + parameters from provided brief; era chart image included from assets.

ETH at 18.7% of Bitcoin's Market Cap, Securing \$272B in Native Value

Flippening ratios + TVS breakdown from provided brief; dashboard image included.

Ratios: BTC 18.70% • USD 1.30% • Gold 0.89%

TVS total: ~\$307.6B

Native ETH secured: \$272.76B

Top ERC20s: Dai \$4.41B; SHIB \$3.51B; Cronos \$2.97B; Tether Gold \$2.65B

Top NFTs: CryptoPunks \$2.13B; BAYC \$0.68B; ENS \$0.63B; Pudgy Penguins \$0.51B

Key Takeaways: Ultra Sound Money Thesis Intact but Gas Activity Is the Critical Variable

ETH is currently mildly inflationary: +0.83%/year (7D window) with burns offsetting ~1% of issuance.

The burn mechanism works, but today's 0.1 Gwei average suppresses burn—activity recovery is the key variable.

Staking locks meaningful supply: 38.9M ETH staked (~32%); 9.1M ETH locked for ~10.7 years on average.

Long-run modeling converges toward ~125.7M ETH equilibrium (assumes 39M staked and 22 Gwei average base gas).

Monetary premium is forming: ETH is 18.7% of BTC's market cap while securing ~\$307.6B TVS on Ethereum.
