
Ultra Sound Money: Ethereum's Post-Merge Supply Dynamics & Monetary Premium

Issuance, burn, staking economics, and long-run supply equilibrium

CURRENT SUPPLY

121,603,980 ETH

BASE GAS (AVG)

0.1 Gwei

ETH PRICE

\$2,243

ETH Supply Growing at +0.83%/Year with Only 192 ETH Burned in 7 Days

Takeaway: Burns offset only ~1% of issuance (0.01x) → temporary supply inflation in a low-fee regime.

CURRENT SUPPLY
121,603,980 ETH

NET CHANGE (7D)
+19,445.89 ETH
Annualized: +0.83%/year

Base Gas at Historic Lows: 0.1 Gwei Average Suppresses Fee Burn

Takeaway: Low base fees → low EIP-1559 burn; equilibrium modeling assumes 22 Gwei average base gas.

7-Day Gas Market (Gwei)

EQUILIBRIUM MODEL ASSUMPTION

22 Gwei

Average base gas required (assumed) for long-run balance

Blob Gas (EIP-4844) Context

AVG BLOB GAS

7,144,934 wei

(7-day average)

BLOB FEE BURN (7D)

0.15 ETH

≈ \$319

DeFi and ETH Transfers Account for 85% of Weekly Fee Burn

Takeaway: Burn concentrates in DeFi + transfers, but absolute burn is tiny at today's fee levels.

Burn by Category (7D, ETH)

Top Burn (7D)

ETH transfers

21.74 ETH

Tether USDT

13.55 ETH

Category total

~192 ETH

38.9M ETH Staked at 2.7% Issuance Rewards with Minimal Tips and MEV

Takeaway: Staking locks meaningful supply; validator yield is primarily protocol issuance.

ETH STAKED

38.9M ETH

~32% of supply

SCARCITY ENGINE LOCK

9.1M ETH

Avg span: 10.7 years

Long-Term Equilibrium Projected at 125.7M ETH with 1,037K ETH/Year Issuance-

Takeaway: Under 39M staked + 22 Gwei base gas, supply converges toward ~125.7M ETH over the long run.

Model Parameters

Staked (assumption)
39M ETH

Base gas (assumption)
22 Gwei

PoS issuance
~2,800 ETH/day

Burn (normalized)
~2,200 ETH/day

Context: ultrasound.money 2Y era chart

Equilibrium balance: ~1,037K ETH/year

ETH at 18.7% of Bitcoin's Market Cap, Securing \$272B in Native Value

Takeaway: Monetary premium tracks both relative market cap and secured value on-chain.

Flipping Progress (ETH ratio)

Total Value Secured (TVS)

Total ≈ \$307.6B

Composition

ETH (native): \$272.76B

ERC20s: \$22.21B

NFTs: \$12.66B

■ ETH ■ ERC20s ■ NFTs

Selected anchors

Top ERC20s: Dai \$4.41B; Shiba Inu \$3.51B

Top NFTs: CryptoPunks \$2.13B

Dashboard Context

Key Takeaways: Ultra Sound Money Thesis Intact but Gas Activity Is the Critical Variable

Bottom line: Structure is sound — the activity regime determines near-term direction.

- ETH is slightly inflationary today: **+0.83%/year** with avg gas **0.1 Gwei**
- Burn works mechanically, but scale is low: only **192.39 ETH** burned in 7 days
- Staking supports scarcity: **38.9M ETH** staked; **9.1M ETH** locked ~**10.7 years**
- Long-run equilibrium: **125.7M ETH** under **39M staked + 22 Gwei** assumption
- Monetary premium is building: **18.70%** of BTC market cap; ~**\$307.6B** TVS

INVESTOR FRAME

Activity is the gating variable

When gas demand normalizes, burn scales and issuance can be structurally offset.

Current headwind

0.1 Gwei fees

Structural tailwinds

EIP-1559 burn + staking lock
Long-run equilibrium model
