

State of the Web 2020–2025

HTTP Archive Trends in Page Weight, Protocols, and Security

JAN 2020 — MAR 2026

Crawl Sample Size Tripled

76 Requests per Desktop Page

TCP Connections Drop to 12 — Multiplexing Gains

TOTAL REQUESTS

76 71

Desktop

Mobile

Up ~3% since 2020

TCP CONNECTIONS PER PAGE

14–27% reduction via HTTP/2 & HTTP/3 multiplexing

HTTPS Requests Reach 99%

Encryption Is Now the Default

HTTP/2 Holds at ~58%

While HTTP/3 Support Surges to 40% — Fastest-Growing Metric

DESKTOP PROTOCOL ADOPTION

MOBILE PROTOCOL ADOPTION

HTTP/3 SUPPORT GROWTH (DESKTOP)

Note: Measures support, not actual usage

Font-Display Usage Reaches 42% on Mobile

Up 61% Since 2020 — FOIT Avoidance Still Room to Grow

Key Takeaways

- **Page weight keeps climbing** — Median desktop pages now transfer ~2,000 KB, roughly 25% heavier than in 2020, driven by richer media and JavaScript
- **HTTPS is the new baseline** — At 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web
- **HTTP/3 is the fastest-growing protocol** — From near-zero to ~40% support in under four years, HTTP/3 is rapidly becoming mainstream
- **Fewer TCP connections despite more requests** — Multiplexing in HTTP/2 and HTTP/3 has cut median connections per page by 15–27%, improving network efficiency
- **Font-display still underused** — At ~40–42% adoption, there is significant room for improvement in avoiding invisible text during font loading
