
State of the Web 2020–2025

HTTP Archive Trends in Page Weight,
Protocols, and Security

January 2020 – March 2026

Source: HTTP Archive — State of the Web Report

Crawl Sample Size Tripled

From ~5M to 16M Desktop URLs Since 2020

Key Milestone

Mid-2022 Jump

Desktop URLs nearly tripled from ~5M to ~15M around mid-2022.

Current Plateau

Crawl stabilized near 16M desktop / 12.5M mobile URLs from mid-2023 onward.

Median Page Weight Climbs Steadily

Desktop median now ~2,000 KB — up ~25% since 2020

**~2,000
KB**

Desktop median (▲ 25%)

**~1,900
KB**

Mobile median (▲ 25%)

75th pctl desktop: >4,000 KB

76 Requests per Desktop Page While TCP Connections Drop to 12

76

Desktop requests/page
(median, ▲ 2.7%)

71

Mobile requests/page
(median, ▲ 2.9%)

TCP Connections per Page (median)

▼ 14–27% fewer connections — multiplexing benefits of HTTP/2 & HTTP/3

HTTPS Requests Reach 99%

Encryption Is Now the Default

99%+

Desktop: 99.2% **Mobile:** 99.1%

▲ ~19–20 percentage points since 2020

Plaintext HTTP is effectively gone

HTTPS Adoption Over Time

From ~80% in early 2020 to 99%+ today — a 19–20 percentage-point climb. Unencrypted HTTP is now effectively extinct on the modern web.

HTTP/2 Holds at ~58% While HTTP/3 Support Surges to 40%

Protocol Adoption (Latest)

HTTP/3: from near-zero to ~40% support — fastest-growing protocol metric

HTTP/3 Support Growth

Measurement Note

HTTP Archive measures HTTP/3 support, not actual usage. Fresh Chrome instances default to HTTP/2 before discovering HTTP/3 via Alt-Svc headers.

Font-Display Usage Reaches 42% on Mobile

Up 61% since 2020 — but more than half of pages still risk FOIT

Font-Display Adoption (Current)

Growth Since 2020

Desktop ▲ 14.9%

Mobile ▲ 61.0%

font-display avoids Flash of Invisible Text (FOIT) during web font loading — still underused by 57–60% of pages.

Key Takeaways

Bigger Pages, Smarter Protocols, Stronger Security

01

Page weight keeps climbing — median desktop pages now transfer ~2,000 KB, roughly 25% heavier than in 2020.

02

HTTPS is the new baseline — at 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web.

03

HTTP/3 is the fastest-growing protocol metric — from near-zero to ~40% support in under four years.

04

Fewer TCP connections despite more requests — multiplexing in HTTP/2 and HTTP/3 cut median connections by 15–27%.

05

Font-display still underused — at ~40–42% adoption, significant room remains to avoid invisible text during font loading.
