

State of the Web 2020–2025

Tracking Page Weight, Protocols & Security at Scale

Based on HTTP Archive crawl data (Jan 2020 – Mar 2026)

Audience: Web Performance Engineers & Front-end Architects

Crawl Sample Size Tripled: From ~5M to 16M Desktop URLs Since 2020

Median Page Weight Climbs Steadily to ~2,000 KB on Desktop

Up ~25%

Since 2020 on both
Desktop and Mobile.

The 75th percentile
desktop page now
exceeds 4,000 KB.

76 Requests per Desktop Page While TCP Connections Drop to 12

Median Total Requests

Desktop
76

Mobile
71

Desktop up 2.7%, Mobile up 2.9%

Median TCP Connections / Page

HTTPS Requests Reach 99%: Encryption Is Now the Default

99.2%

Desktop HTTPS Requests
(Mobile closely follows at 99.1%)

Adoption Climb from ~80% to 99%

HTTP/2 Holds at ~58% While HTTP/3 Support Surges to 40%

Explosive Growth

HTTP/3 support has surged from near-zero in 2020.

Note: HTTP Archive measures HTTP/3 support rather than usage because fresh Chrome instances default to HTTP/2 on first connection.

Font-Display Usage Reaches 42% on Mobile, Up 61% Since 2020

Avoiding FOIT

The font-display CSS property helps avoid the Flash of Invisible Text during web font loading.

While adoption is growing strongly, >50% of pages still risk FOIT.

Key Takeaways: Bigger Pages, Smarter Protocols, Stronger Security

Page weight keeps climbing: Median desktop pages transfer ~2,000 KB, roughly 25% heavier than in 2020.

HTTPS is the new baseline: At 99%+ of requests, unencrypted HTTP is essentially extinct on the modern web.

HTTP/3 is the fastest-growing protocol metric: From near-zero to ~40% support in under four years, HTTP/3 is rapidly becoming mainstream.

Fewer TCP connections despite more requests: Multiplexing in HTTP/2 and HTTP/3 has cut median connections per page by 15–27%.

Font-display still underused: At ~40–42% adoption, there is significant room for improvement in avoiding invisible text.
