

State of the Web 2020–2025: Tracking Page Protocols & Security at Scale

Based on HTTP Archive crawl data from Jan 2020 – Mar 2026

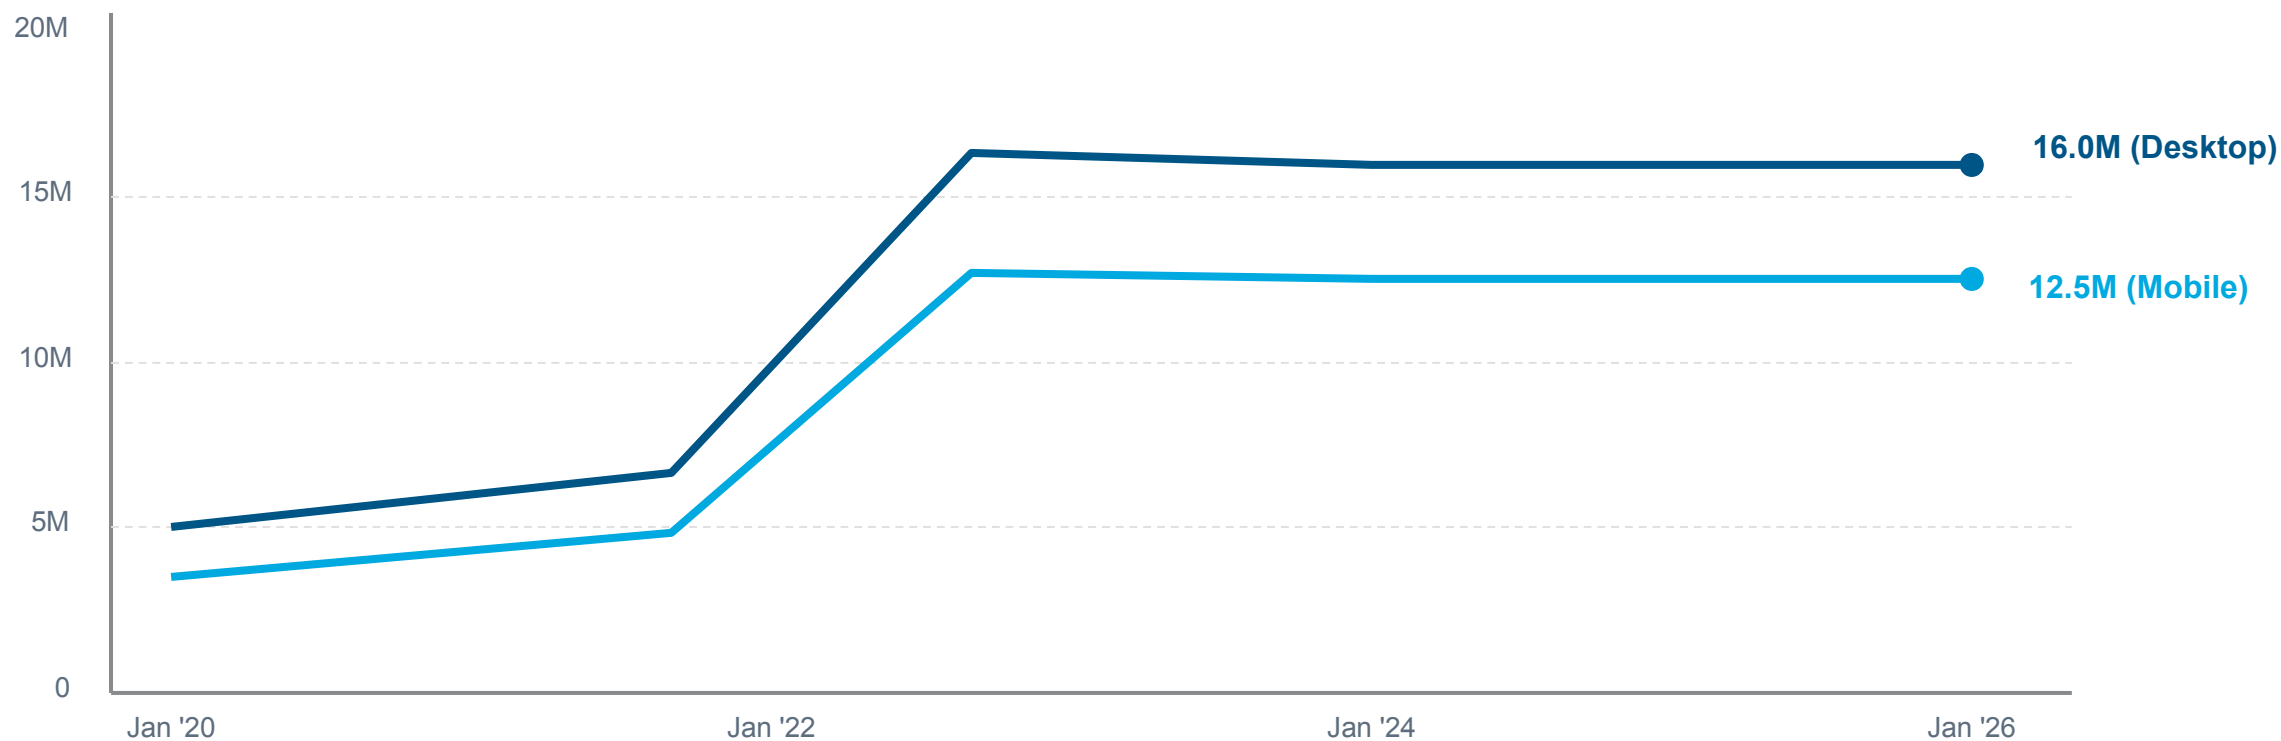

Web Performance Infrastructure Trends

CONFIDENTIAL

TAKEAWAY

Both desktop and mobile crawl sample sizes more than tripled before stabilizing in 2023.

URL Crawl Count (Millions)

Median Page Weight Climbs Steadily to ~2,000 KB on Desktop

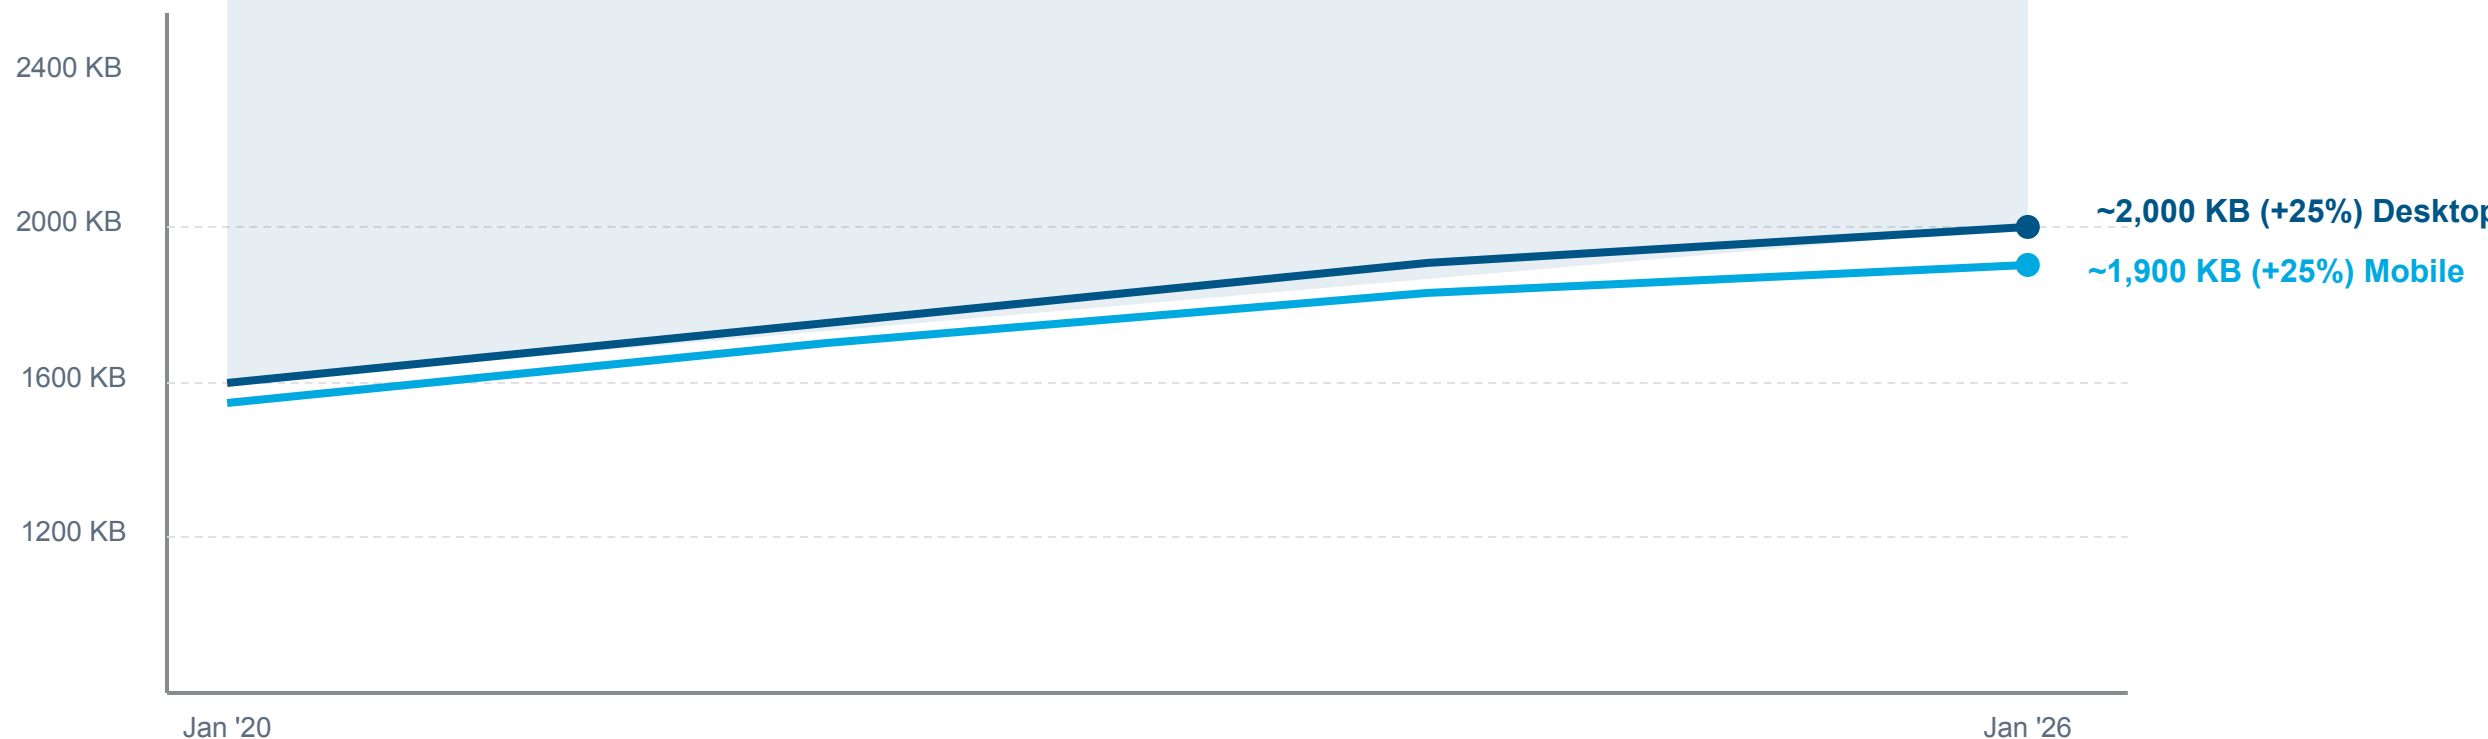

State of the Web

TAKEAWAY

The web is getting heavier: desktop pages transfer 25% more bytes than in 2020.

75th Percentile exceeds 4,000

Median Total Kilobytes (Desktop vs Mobile)

TAKEAWAY

Multiplexing via HTTP/2 & HTTP/3 delivers network efficiency despite slightly more requests.

Total Requests (Median)

76 Desktop

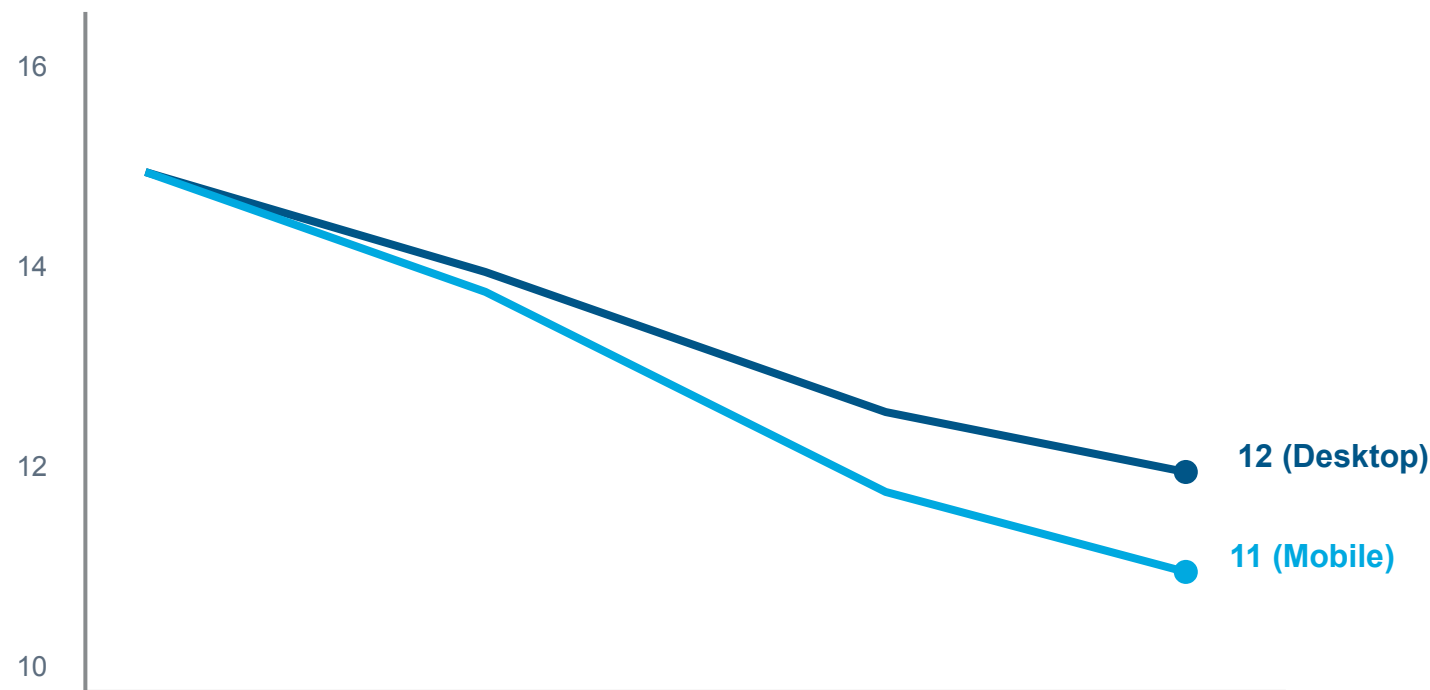

▲ 2.7% since 2020

Total Requests (Median)

71 Mobile

▲ 2.9% since 2020

TCP Connections Per Page

TAKEAWAY

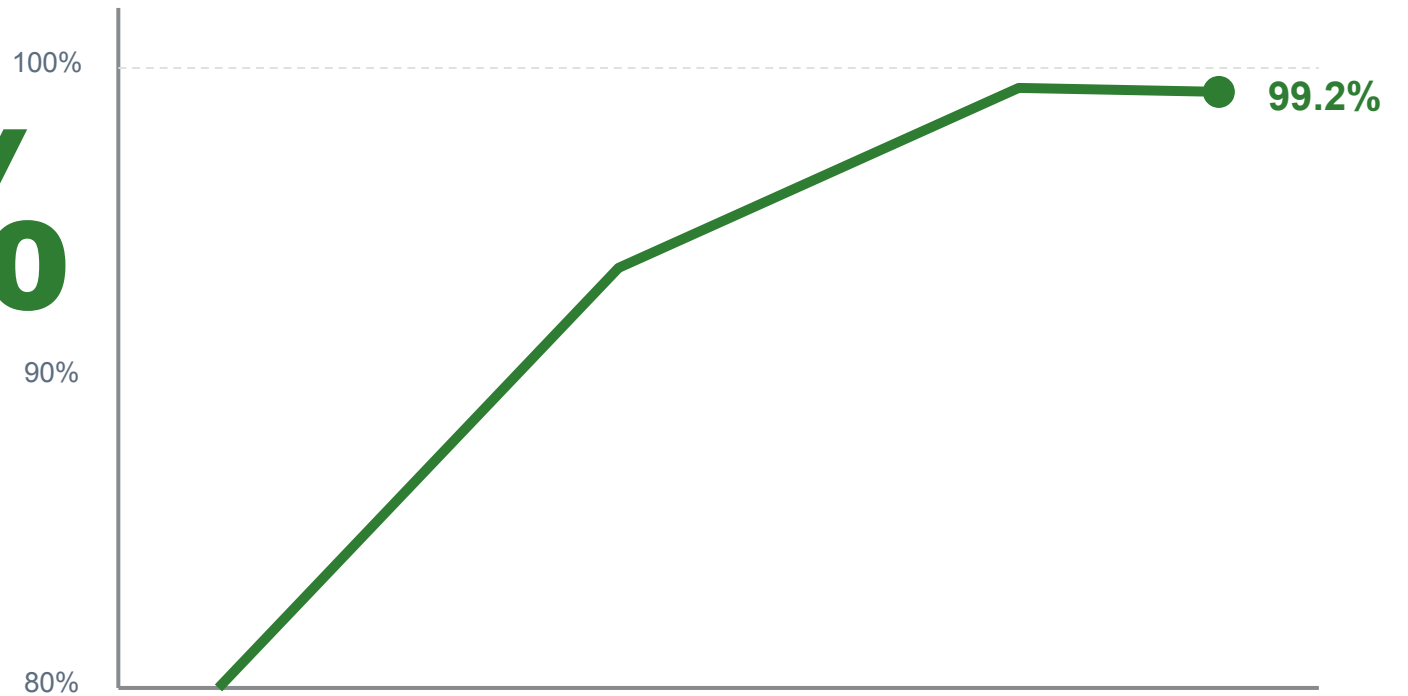

Unencrypted HTTP is practically extinct. Over 99% of requests use HTTPS.

99.2%

Desktop Requests

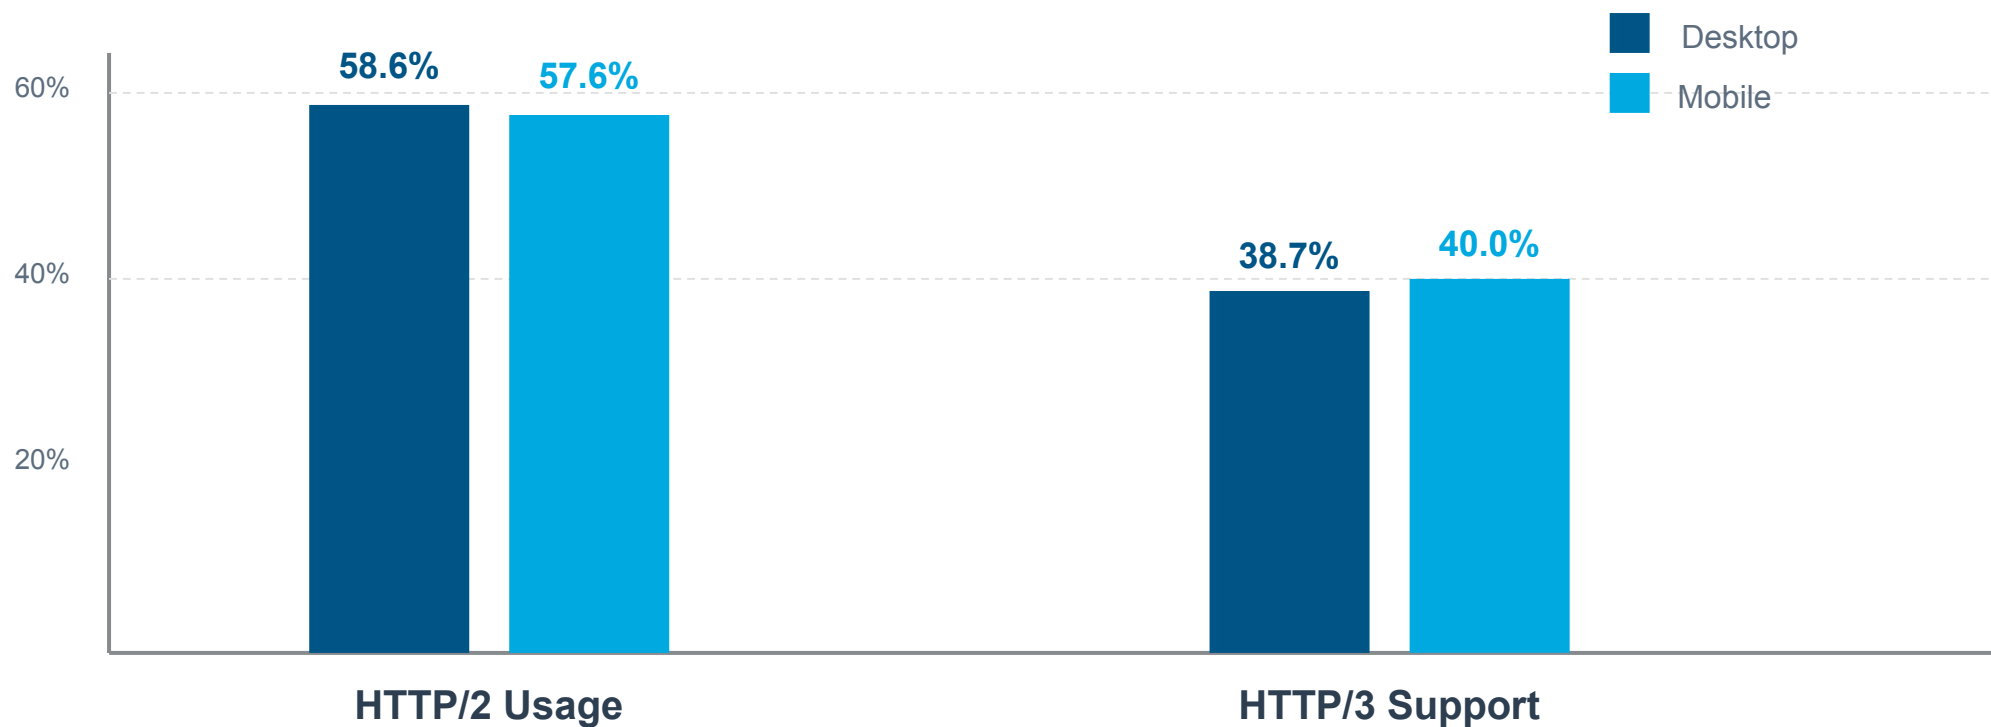

Mobile at 99.1%

Up ~20% since 2020

TAKEAWAY

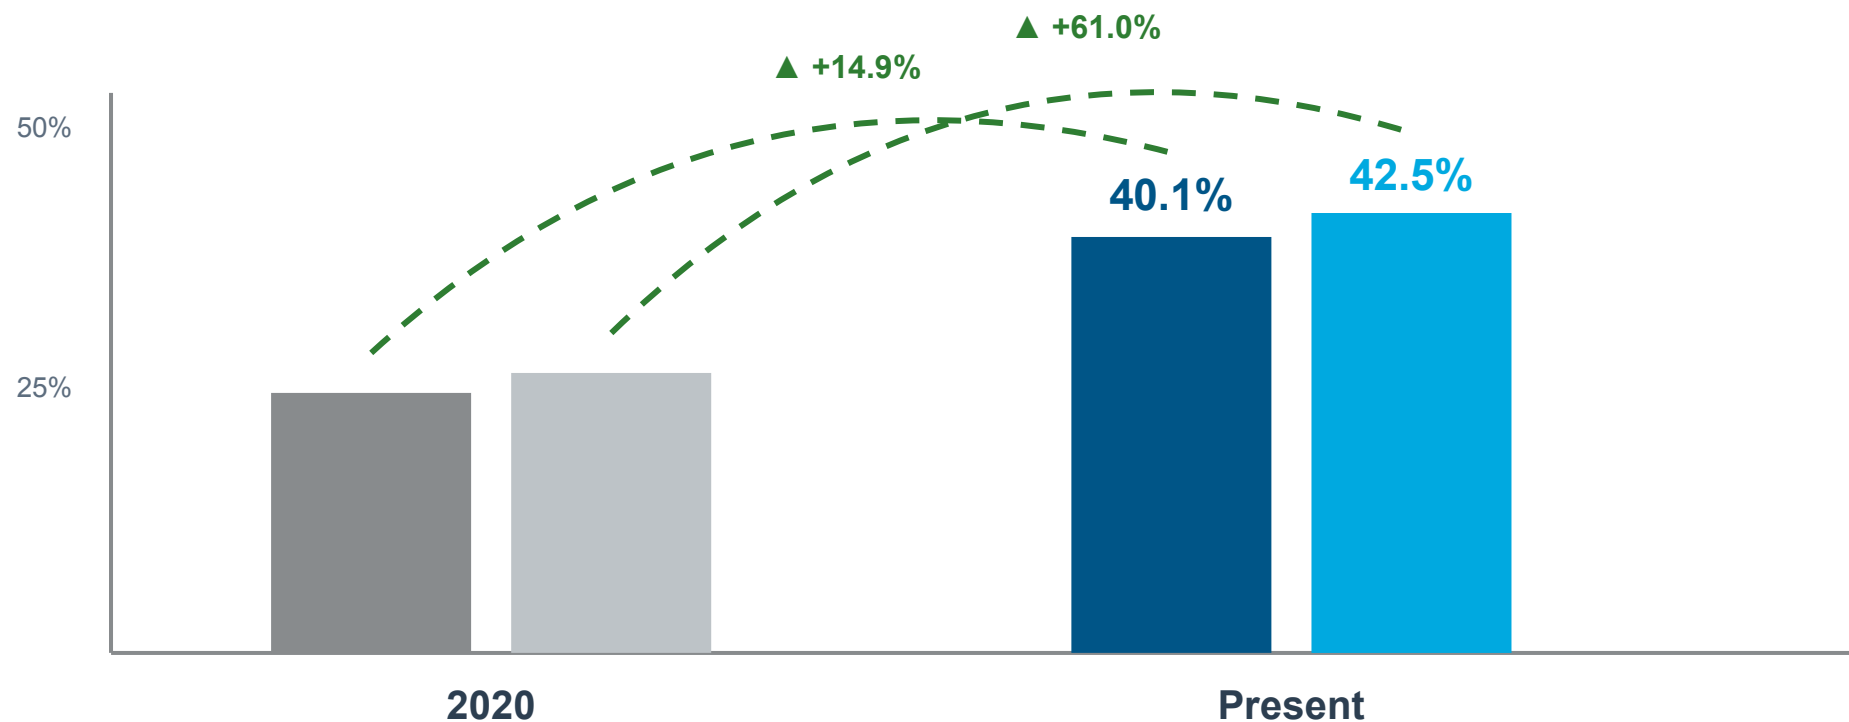

HTTP/3 has seen explosive adoption, climbing from near zero to ~40% in under four years.

TAKEAWAY

Font-display usage prevents invisible text during font loads (FOIT), but room for improvement remains.

CSS `font-display` Adoption

TAKEAWAY

Apply these baselines to your own infrastructure to prioritize optimization efforts.

- **Page weight continues to grow**
Median desktop pages are now ~2,000 KB, driven by media and JS.
- **HTTPS is effectively universal**
At 99%+, unencrypted HTTP is essentially extinct.
- **HTTP/3 is the fastest-growing metric**
Support reached ~40% in under four years.
- **Connections decline despite more requests**
Multiplexing reduced TCP connections per page to 12.
- **Font-display has room to grow**
Adoption is ~42%; missing it risks Invisible Text (FOIT).
