Key Takeaways: What 2024 Tells Us About **JS's Future**

- 1 Component ownership beats imports.** shadcn/ui's copy-paste model reached 77.5k total stars — developers prefer owning and customizing code over importing black-box packages.
- 2 HTML-first is serious.** htmx overtook React as the #1 front-end framework by stars added, validating server-driven, low-JavaScript architectures for production use.
- 3 React is becoming a framework specification.** Server Components and Server Functions mean multiple frameworks now interpret React's primitives differently — choose your framework, not just React.
