Key Takeaways: What 2024 Tells Us About JavaScript's Future

- 1 Component ownership beats imports.** shadcn/ui's copy-paste model reached 77.5k total stars by letting developers own and customize component code.
- 2 HTML-first is serious.** htmx overtook React as the #1 front-end framework by stars added, validating server-driven, low-JavaScript architectures.
- 3 React is becoming a framework spec.** With Server Components and Server Functions in React 19, multiple frameworks now interpret React's primitives differently.

Heading into 2025: expect server-driven UIs, AI-augmented dev tools, and lighter desktop runtimes to keep accelerating.
