

Ultra Sound Money

Ethereum's Post-Merge Supply Dynamics
and Monetary Premium

Current Supply **121.6M ETH** | Gas **0.1 Gwei** | ETH Price **\$2,243**

Source: ultrasound.money

ETH Supply Growing at +0.83%/Year

Only 192 ETH Burned in 7 Days — 0.01x Issuance Offset Ratio

Current Supply

121,603,980 ETH

7-Day Net Change

+19,445.89 ETH

Issuance Offset Ratio

0.01x

Burns offset only ~1% of new issuance

Base Gas at Historic Lows

0.1 Gwei Average Suppresses Fee Burn

EIP-1559 Burn Mechanism

Base fees are permanently burned (removed from supply), while priority fees (tips) go to validators. At current gas levels, base fee burn is negligible.

7-Day Gas Market Range

Min: 0.0 Gwei Avg: 0.1 Gwei Max: 1.3 Gwei

Blob Gas (EIP-4844): Avg 7.1M wei | 0.15 ETH burned (\$319) in 7 days

Low gas = low burn = temporary supply inflation

DeFi and ETH Transfers Account for 85% of Weekly Fee Burn

Top Burn Leaders (7-Day)

ETH Transfers

21.74 ETH burned

Tether USDT

13.55 ETH burned

Total 7-day burn

~192 ETH

Recent blocks: 0.00–0.01 ETH/block

7-day record: 0.07 ETH single block

38.9M ETH Staked at 2.7% Issuance Rewards

Minimal Tips and MEV — Protocol Issuance Dominates Rewards

■ Issuance (2.7%) ■ Tips (0.1%) ■ MEV (0.1%)

Total Staked

38.9M ETH

~32% of total supply

Scarcity Engine

9.1M ETH locked

Avg lock: 10.7 years

Total Validator APR

~2.9%

0.9 ETH/validator issuance

PoS issuance: ~2,800 ETH/day | Fee burn (normalized): ~2,200 ETH/day

Long-Term Equilibrium Projected at 125.7M ETH

1,037K ETH/Year Issuance-Burn Balance at Equilibrium

Projection Parameters

ETH Staked: **39M**

Base Gas: **22 Gwei**

PoS Issuance: **2.8K ETH/day**

Fee Burn: **2.2K ETH/day**

Staker Rate: **2.7%/yr**

Non-Staker Burn: **1.2%/yr**

Equilibrium: **125.7M ETH**

Era transitions: Genesis (5 ETH/block) → Byzantium (3) → Constantinople (2) → Phase 0 staking → London burn → Merge (PoW removal)

Key Takeaways

Ultra Sound Money Thesis Intact — Gas Activity Is the Critical Variable

01

Currently Inflationary

ETH is slightly inflationary at +0.83%/yr due to historically low gas fees (avg 0.1 Gwei), with burns offsetting only ~1% of issuance.

02

Burn Requires Activity

The burn mechanism works but requires sustained on-chain activity. DeFi and ETH transfers drive 85% of burn volume.

03

Staking Locks Supply

38.9M ETH (32% of supply) is staked, creating significant supply lock with 9.1M ETH locked for avg 10.7 years.

04

Structural Equilibrium Sound

Long-term equilibrium at 125.7M ETH is structurally sound, requiring sustained ~22 Gwei average gas to balance issuance and burn.

05

Growing Monetary Premium

18.7% of Bitcoin's market cap and \$307B+ TVS demonstrate growing but still early monetary premium.

The ultra sound money thesis depends on on-chain activity recovery.

At current gas levels, ETH remains inflationary — but the structural mechanism for deflation is built and waiting.
